Handbook of Research on Mobile Devices and Applications in Higher Education Settings Aug 08 2020 Mobile phones have become an integral part of society, as their convenience has helped democratize and revolutionize communication and the marketplace of ideas. Because of their ubiquity in higher education, undergraduate classrooms have begun to utilize smartphones and tablets as tools for learning. The Handbook of Research on Mobile Devices and Applications in Higher Education Settings explores and fosters new perspectives on the use of mobile applications in a classroom context. This timely publication will demonstrate the challenges that universities face when introducing new technologies to students and instructors, as well as the rewards of doing so in a thoughtful manner. This book is meant to present the latest research and become a source of inspiration for educators, administrators, researchers, app developers, and students of education and technology.

Bringing Iterative Design to Ubiquitous Computing: Interaction Techniques, Toolkits, and Evaluation Methods Jan 01 2020 An iterative human-centered design process is required to create interfaces that are useful, intuitive, efficient, and enjoyable for users in the ubiquitous computing domain. Currently, only experts can design, prototype, and deploy ubiquitous computing applications; others lack the tools and conceptual frameworks. This work starts to fill the gap by providing contributions that support each phase of the iterative human-centered design process and address the complexity of ubiquitous computing application scenarios. • To support the design phase, the range of ubiquitous mobile input techniques are organized into a design space, which helps identify the relationships between input techniques, and select the most appropriate input technique for an interaction scenario. • To support the prototyping phase, the iStuff Toolkit architecture simplifies construction of functional prototypes for ubiquitous computing application scenarios. The architecture has been used to create two separate toolkits: iStuff to simplify prototyping physical user interfaces for ubiquitous computing, and iStuff Mobile to simplify prototyping new sensorbased interactions for mobile phones in ubiquitous computing. • To support the evaluation phase, a new conceptual framework based on expressiveness is used to demonstrate how to evaluate input devices in prototype form (suffering from reduced resolution or sampling rates) and still make conclusions about future performance if further time and money were invested in improvements. To illustrate how this iterative design process can be used from drawing board to deployment, experiences developing REXplorer are shared. REXplorer is one of the first permanently installed pervasive games and helps tourists explore the historical UNESCO World Heritage city of Regensburg, Germany. Players use a special "paranormal activity detector" (a device composed of a mobile phone and a GPS receiver) to interact with location-based and site-specific spirits. "Casting a spell" by waving the wand-like detector lets players awaken and communicate with the spirits to receive and solve quests. The game is designed to make learning history fun and influence tourists' path through the city.

Organizing Entrepreneurship Nov 22 2021 Entrepreneurship has regained centre stage in the contemporary knowledge-intensive and innovation-driven economy, as well as in research. Integrating classic and recent insights into the organization, economics and management of entrepreneurial activities, Organizing Entrepreneurship aims to blend rigor with relevance, and connects theory with practical problems around key questions, such as: Is there any method in having 'good ideas' and discovering opportunities? Through which mechanisms can human, social, technical and financial resources be attracted and dedicated to new projects? Which alternative governance and organizational structures are to be considered for the constitution and organization of a new firm? To grow or not to grow? (Or how to grow without up-sizing)? How do you organize grown-up firms in an entrepreneurial mode? How can environments and external institutions help? Original case studies are discussed and integrated throughout the text, which reflect a wide range of sectors (from agri-business to high tech) and countries (including emerging economies). Providing a unique resource for students and instructors of entrepreneurship and organization, this book also offers new insights to entrepreneurs and investors in the organization of new firms, as well as to managers striving to infuse entrepreneurial behaviors into their already established firms.

Cyber Bullying: Protecting Kids and Adults from Online Bullies Jan 13 2021 Before the advent of the widespread use of the internet, bullying was confined to school grounds, classrooms, and backyards. Now, the virulence of bullying has taken on new meaning, as bullies take to the web to intimidate, harrass, embarrass, and offend others. Through email, cell phones, text messaging, and social networking sites, bullies can carry out their bullying in many cases without ever having to confront their victims, and often without consequence. Whereas the audiences for humiliation in the past was often limited to those who witnessed the bullying and perhaps talked to others about it, now, bullying takes place in cyberspace, where images and audio can be posted online for whole school communities to witness, discuss, and comment on. The social, psychological, and sometimes economic trauma experienced by victims can be devastating, and in some cases, cyber bullying has crossed the line and became a criminal act. Because just about anyone can be the victim of cyber bullying, and because it often goes unreported, there are precious few resources available to victims, parents, teachers, and others interested in combatting this new form of bullying. This book provides, however, a thoroughly developed, well-researched analysis of cyber bullying - what it is, how it is carried out, who is affected, and what can and should be done to prevent and control its occurrence in society. The book captures the sensational, technological, and horrific aspects of cyber bullying while balancing these with discussion from perspectives about social computing, various academic disciplines, possibilities for public policy and legislation formulation, education, and crime prevention strategies. Using case examples throughout, readers will come away with a new sense of indignation for the victims and a better understanding of the growing problem and how to combat it.

Understanding New Media Feb 23 2022 Marshall McLuhan made many predictions in his seminal 1964 publication, *Understanding Media: Extensions of Man*. Among them were his predictions that the Internet would become a «Global Village», making us more interconnected than television; the closing of the gap between consumers and producers; the elimination of space and time as barriers to communication; and the melting of national borders. He is also famously remembered for coining the expression «the medium is the message». These predictions form the genesis of this new volume by Robert Logan, a friend and colleague who worked with McLuhan. In *Understanding New Media* Logan expertly updates *Understanding Media* to analyze the «new media» McLuhan foreshadowed and yet was never able to analyze or experience. The book is designed to reach a new generation of readers as well as appealing to scholars and students who are familiar with *Understanding Media*. Visit the companion website, understandingnewmedia.org, for the latest updates on this book.
