Principles of Reliable Soldering Techniques Jan 30 2020 Soldering, Though Being An Age Old Phenomenon, Is Still Perhaps A Difficult Subject To Understand, Due To Its Interdisciplinary Nature. In This Book, Efforts Have Been Made To Describe The Physical Theories Responsible For Making A Good Joint, The Chemical Actions During Its Formation And The Electrical, Thermal And Mechanical Requirements Essential To Ensure Its Reliability. The Four M'S; Material, Machine, Method And Man, Necessary For Designing A Solder Joint Have Been Described In Detail. Further, Process Control, Solder Joint Inspection Criteria, Solder Joint Defect Analysis And Its Repair/Rework Are Also Discussed. Additionally, Brief Introductions To Surface Mount Devices (Smd) And Surface Mount Technology (Smt) Have Been Included As Annexures. The Book Will Be Useful In Industry, And To Design Production, Process Planning And Quality Control Engineers, As Well As In Engineering/Technical Colleges To Students As A Reference Book For The Present And, Hopefully, Future Modified Courses. Sensors in Agriculture Jan 12 2021 Agriculture requires technical solutions for increasing production while lessening environmental impact by reducing the application of agro-chemicals and increasing the use of environmentally friendly management practices. A benefit of this is the reduction of production costs. Sensor technologies produce tools to achieve the abovementioned goals. The explosive technological advances and developments in recent years have enormously facilitated the attainment of these objectives, removing many barriers for their implementation, including the reservations expressed by farmers. Precision agriculture and 'smart farming' are emerging areas where sensor-based technologies play an important role. Farmers, researchers, and technical manufacturers are joining their efforts to find efficient solutions, improvements in production, and reductions in costs. This book brings together recent research and developments concerning novel sensors and their applications in agriculture. Sensors in agriculture are based on the requirements of farmers, according to the farming operations that need to be addressed.

Dietary Fiber in Health and Disease Feb 10 2021 This volume carries the proceedings of the Vahouny Fiber Symposium, which took place in Washington DC, in March of 1996. George V. Vahouny pioneered this conference,

which was conceived as a means of exchanging information on the latest advances in fiber research. The conference was renamed in George Vahouny's honor after his untimely death. In this volume we have included the reminiscences of Prof. A.R.P. Walker, one of the pioneers in the field, and discussion of the epidemiological findings relating dietary fiber to heart disease, cancer, and gastrointestinal disease. As the overall definition of fiber has broadened we have included for discussion other aspects of carbohydrate chemistry and metabolism. Complex carbohydrates were the subject of a full session and resistant starch and the role(s) of oligosaccharides were discussed later in the meeting. Another area of fiber metabolism that is beginning to burgeon is that of the short chain fatty acids, and this too was the subject of presentations and discussion. In addition, the more familiar topics in dietary fiber were updated. Workshops devoted to specific areas of fiber research have now become a mainstay of these meetings, and they were repeated successfully. Due to restraints on spending, the attendance at this meeting was somewhat smaller than usual but the discussion was lively and pertinent. We are deeply grateful to our sponsors and contributors for their continuing interest in dietary fiber research, and for their generous support of this symposium.
