*Using Photography and Other Arts-Based Methods With English Language Learners* Nov 30 2019 This book focuses on arts-based classroom practices that can be used to support English Language Learners. Recognizing that all children learn differently, but that the needs of children learning a new language are particularly unique, each chapter offers innovative in which arts-based methods can support learning across content areas. This book also recognizes the intersectionality of language and socio-economic status that exists for many ELLs. Framing knowledge of two languages as an asset for children who otherwise may come from low resource contexts is an important feature of these chapters. This edited book offers resources and

practical suggestions from teachers who have successfully integrated the arts into their curriculum. It is a useful resource for classroom teachers and other practitioners who work with ELL learners from K-12.

*Pedagogy in Poverty* Aug 20 2021 As South Africa transitioned from apartheid to democracy, changes in the political landscape, as well as educational agendas and discourse on both a national and international level, shaped successive waves of curriculum reform over a relatively short period of time. Using South Africa as a germane example of how curriculum and pedagogy can interact and affect educational outcomes, *Pedagogy in Poverty* explores the potential of curricula to improve education in developing and emerging economies worldwide, and, ultimately, to reduce inequality. Incorporating detailed, empirical accounts of life inside South African classrooms, this book is a much-needed contribution to international debate surrounding optimal curriculum and pedagogic forms for children in poor schools. Classroom-level responses to curriculum policy reforms reveal some implications of the shifts between a radical, progressive approach and traditional curriculum forms. Hoadley focuses on the crucial role of teachers as mediators between curriculum and pedagogy, and explores key issues related to teacher knowledge by examining the teaching of reading and numeracy at the foundational levels of schooling. Offering a data-rich historical

sociology of curriculum and pedagogic change, this book will appeal to academics, researchers and postgraduate students in the fields of education, sociology of education, curriculum studies, educational equality and school reform, and the policy and politics of education.

*Setting Consensus Goals for Academic*

*Achievement* Mar 27 2022 This special issue is based on a workshop which began with a description and examination of the current National Assessment of Educational Progress (NAEP) standard-setting model, then looked to standard-setting applications outside of education. These applications included those that focus on human performance and the adequacy of human performance; in these contexts, raters were asked to focus on the knowledge and skills that underlie competent performance. Researchers also examined applications that focus on the impact of environmental agents on life and the ecology; in these cases, raters began with the knowledge that more (or less) of a substance is better and, as for NAEP, the judgment task was to determine "how good is good enough." They wished to examine parallels in the objectives, empirical grounding, judgmental requirements, and policy tensions for standard setting in NAEP and in other domains. These papers were commissioned to examine the current state of affairs and residual issues with respect to achievement-level setting in NAEP and to help determine whether the models and methods used in other disciplines have useful application to education. It is important to note that the papers represent the authors' views, not necessarily those of the committee or National Research Council. This issue and the workshop discussion point out a number of analogies between the objectives, requisite data, judgment requirements and policy issues for

NAEP and other applications. The editors hope that this issue and wide distribution of these papers will prompt others to join in this interesting analysis and debate.

Art Education Jan 25 2022

Recommending that art be taught as a humanity, this volume provides a philosophical rationale for the idea of discipline-based art education. Levi and Smith discuss topics ranging over both the public and private aspects of art, the disciplines of artistic creation, art history, art criticism, and aesthetics, and curriculum proposals featuring five phases of aesthetic learning. While there is no consensus on how the various components of aesthetic learning should be presented in order to accomplish the goals of discipline-based art education, the authors point out that progress toward those goals will require that those who design art education programs bring an understanding of the four disciplines to their work. The introductory volume of a five-volume series, this book will appeal to elementary and secondary art teachers, those who prepare teachers at the college level, and museum educators.
