Natural Philosophy Apr 26 2022 Paul Thagard uses new accounts of brain mechanisms and social interactions to forge theories of mind, knowledge, reality, morality, justice, meaning, and truth. Natural Philosophy brings new methods for analyzing concepts, understanding values, and achieving coherence. It shows how to unify the humanities with the cognitive and social sciences. How do people know what is real and strive to make the world better? Philosophy is the attempt to answer general questions about the nature of knowledge, reality, and values. Natural Philosophy asks questions by drawing heavily on the sciences and finds no room for supernatural entities such as souls, gods, and possible worlds. It provides original accounts of the traditional branches including epistemology, metaphysics, ethics, and aesthetics. Rather than reducing the humanities to the sciences, this book displays fertile interconnections that show that philosophical and artistic practices can be much better understood by considering how human brains operate and interact in social contexts. The sciences and the humanities are interdependent, because the natural and social sciences cannot avoid questions about methods and values that are primarily the province of philosophy. This book belongs to a trio that includes Brain-Mind: From Neurons to Consciousness and Creativity and Mind-Society: From Brains to Social Sciences and Professions. They can be read independently, but together they make up a Treatise on Mind and Society that provides a comprehensive treatment of the cognitive sciences, social sciences, professions, and humanities.

Corruptible Oct 01 2022 'Illuminating . . . reveals why some people and systems are more likely to be corrupted by power than others' - Adam Grant 'Passionate, insightful, and occasionally funny. . . . Corruptible sets out the story of the intoxicating lure of power-and how it has shaped the modern world' - Peter Frankopan 'A brilliant exploration' - Dan Snow 'Klaas is the rarest of all: a scientist who can also tell great stories. He mixes memorable anecdotes with stern analysis to tackle one of the biggest questions of all: do we have to be ruled by bad people?' - Peter P. Power corrupt or are corrupt people drawn to power? Are tyrants the products of bad systems or are they just bad people? And why do we give power to awful people? In Corruptible, political scientist Brian Klaas draws on over 500 interviews with some of the world's top leaders - from the noblest to the dirtiest - including presidents, war criminals, cult leaders, terrorists, psychopaths, and dictators to reveal the most surprising workings of power: how children can predict who is going to win an election based just on the faces of politicians; why narcissists make more money than certain species of bee more corrupt than others; whether a thirst for power is a genetic condition; and why being the second in command is in fact the smartest choice. From scans of power to the effects of power on monkey drug use, Klaas weaves cutting-edge research with astonishing encounters (including a ski lesson with the former viceroy of Iraq, tea with a former UN ambassador and breakfast with Madagascar's yogurt kingpin president). Written by the creator of the award-winning Power Corrupts podcast, Corruptible challenges our basic assumptions about power and board room to the war room, and provides a roadmap for getting better leaders at every level.

Selected Nov 02 2022 We are all leaders or followers - or both. We can recognise leadership in almost every area of life: in the workplace, among friends, within families, in politics and religion. What makes a good or bad leader, why are some people followers, and what are the benefits of each? Fusing psychology, business, history and current affairs, Selected examines how and why leadership has evolved over tens of thousands of years, and presents a bold and compelling new 'mismatch hypothesis': that the slowness of evolution means that there is a mismatch between modern leadership and the kind of leadership that our Stone Age brains are still wired for. This makes for all sorts of tendencies, problems and solutions that no author has yet discussed but that affect all of us - it's why, for example, we prefer working in small companies. Full of fascinating examples drawn from a diverse range of spheres, from politics and commerce to sport and culture, Van Velsor shows our evolutionary history explains why taller political candidates usually win, why women chief executives attract such hostility and why we like it when the boss asks after our children. This is the first book of its kind to explore how the evolution of leadership affects us all - and, by doing so, to provide deep, practical insight for all of us into our personal and professional lives.

Processual Perspectives on the Co-Production Turn in Public Sector Organizations Jan 28 2022 Existing research understands co-production as leading to shifts in roles of the public sector institutions and their staffs. The shift is seen in the way that a discursive use of the term service provision with embedded logics encompassing fiscal accountability, performance measurement, efficiency

regulation has changed towards discourses that embrace collaboration between the public sector front staff and the citizens, with the aim of developing legitimate and effective welfare produced by means of active participation and distributed decision making. However, this change requires new approaches to the way in which the implementation of new practices and the practice as studied and researched, and how the new practices and tools are understood and evaluated in organizations. *Processual Perspectives on the Co-Production Turn in Public Sector* is an essential reference book that examines, unfolds, and develops approaches to co-production and implementation as dynamic, processual, collaborative, sensemaking, and as requiring a capacity building and learning. Moreover, the book examines new approaches to engage citizens and public sector actors in collaborative and co-productive processes, especially with concrete goals pertaining to sustainability, social equity, democratic legitimacy, etc. Covering topics that include knowledge management and collective leadership, the book presents perspectives of building, learning, change, and evaluation in organizations and current research in different areas of the public sector. It is intended for public sector administrators and managers investigating relevancy, approaches, and methods in co-production. Furthermore, it targets civil actors and welfare service users, leaders and managers of public organizations, researchers, academician in programs that include social welfare development, public administration, political science, and organizational development.

The Positive Shift Aug 19 2021 It's the reason why spending time on Facebook makes us feel sad and lonely. Why expensive name-brand medicines provide better pain relief than the generic ones they share the same ingredients. And why a hospital room with a good view speeds up recovery from surgery. The truth is, the way we think about ourselves and the world around us drives our happiness, health, how fast or slow we age, and even how long we live. In fact, people with a positive mindset about aging live on average 7.5 years longer than those without. That realization is alarming to those of us who struggle to see the bright side, but the good news is we can make surprisingly simple changes or small shifts to how we think, feel, and act that will really pay off. *Positive Shift: Mastering Mindset to Improve Happiness, Health, and Longevity*, Dr. Catherine Sanderson breaks down the science of thought and shows how our mindset—or thought patterns—has a substantial influence on our psychological and physical health. Most important, this book demonstrates how, no matter what our natural tendency, with practice we can make minor tweaks that will improve the quality—and longevity—of our life. Combining cutting-edge research from the fields of psychology, neuroscience, and medicine, as well as vivid real-world examples of a positive mindset, *The Positive Shift* gives readers practical and easy strategies for changing maladaptive thought patterns and behaviors so they can live longer, happier lives. These behaviors include: Appreciating nature, with actions as simple as eating lunch outside • Giving to others, like volunteering • Spending money on experiences, not possessions Living your best life is truly mind-blowing. Believe in yourself and rethink your way to a happier reality.

Mismatch Aug 07 2020 Our brains evolved to solve the survival problems of our Stone Age ancestors, so when faced with modern day situations that are less extreme, they often encourage us to do things that are not in our best interests. Our primitive brains put us on the wrong foot by responding to stimuli that - in prehistoric times - would have prompted behaviour that was beneficial. If you've ever felt an anxious fight or flight response to a presenting at a board meeting, equivalent to facing imminent death by sabre-toothed tiger, then you have experienced a mismatch. *Mismatch* is about the clash between our biology and the modern world. It is about the dramatic contrast between the first few million years of human history - when humans lived as hunters and gatherers in small-scale societies - and the past twelve thousand years of the agricultural revolution which have led us to comfortable lives in a very different social structure. Has this rapid transition been good for us? How do we, using our primitive minds, try to solve the problems of a modern information society that radically changes every ten years or so? Ronald Giphart and Mark van Vugt show that humans have changed their environment so drastically that the mismatch has significantly increased, and these conflicts can have profound consequences. Reviewed through mismatch glasses, social, societal, and technological trends can be better understood, ranging from the popularity of Facebook and internet porn, to the desire for cosmetic surgery, to our attitudes towards refugees. Mismatches can also affect our physical and psychological health. In terms of our attitudes to happiness, physical exercise, choosing good leaders, or finding ways to feel better at home or work. Finally, *Mismatch* gives us an insight into politics and policy. It shows how to enable governments, institutions and businesses to create an environment better suited to human nature, its potential and its constraints. This book is about converting mismatches into matches so your life is matched to how your mind operates, the greater your chances of leading a happy, healthy and productive life.

Carbon Inequality Oct 28 2019 With a specific focus on the United States and the United Kingdom, *Carbon Inequality* studies the role of the richest people in contributing to climate change through luxury consumption and their investments. In an innovative contribution, it attempts to quantify personal responsibility for shareholdings in large fossil fuel companies. This book explores the implications of the richest people's historic responsibility for global warming, the impacts of which affect them less than most others in global society. Kenner analyses how the richest people in the world, large oil and gas companies have successfully used their political influence to lobby the US and UK government. This assessment of their growing political power is particularly pertinent at a time of increasing inequality and growing public awareness of the impact of climate change. The book also highlights the crucial role of the richest in blocking the low-carbon transition in the US and UK, exploring how this could be countered to ensure fossil fuels are fully replaced by renewable energy. This book will be of great relevance to scholars and policy makers with an interest in climate change and sustainability transitions.

The Works of the Rev. Sydney Smith Jun 24 2019 Rescuing Democracy May 04 2020 This book proposes a new institution - the 'People's Forum' - to enable democratic governments to effectively address long-running issues like global warming, income inequality. It would help citizens decide what strategic problems their government must fix, especially where this requires them to suffer some inconvenience or cost. The People's Forum is a new diagnosis of government failure in democracies. The book tests its own analyses of government failure by seeing whether these might help us to explain the failures of particular democracies, address (and in some cases, to even recognize) several crucial environmental problems. The essential features of a new design for democracy are described and then compared with those of existing institutional designs that were also intended to improve the quality of democratic government. In that comparison, the People's Forum turns out to be not only the most effective design for implementing competent policy, but also the easiest to establish and run. The latter advantage is crucial as there has been no success in getting previous designs into actual trial practice. This book may inspire a small group to raise the money to set up and run the People's Forum. Then, as citizens see it operating and engage with it, they may come to regard the new Forum as a way of helping them to deliberate long-running issues and to get their resulting initiatives implemented by government. Smith also discusses how the People's Forum must be managed and how different political ideologies may react to it. An Afterword sets out the method by which this design was produced, to help those who might want to devise an institution themselves. The environmental science that the book develops to test its diagnosis are applied in an Appendix to outline crucial options for the future of Tasmania. Similar options apply to many countries and provinces. As indicated above, those choices are currently beyond the capacity of democratic governments to address and in some cases, even to recognize. But the People's Forum may help us to see the morass.

Laughing at Yourself Jul 30 2022 Frank E. Burdett is a survivor from seriousness. This is no laughing matter and only needs a simple explanation. Frank decided to divorce himself from all seriousness in an effort to gain control of his sense of humour. Once he attained his sense of humour he realised that the amount of absurdity and nonsense that abounds in society can only be diagnosed as a disease. The gentlest of terms, as over-seriousness of epidemic proportions. Frank has researched and evaluated the importance of nurturing your sense of humour in order to balance the well-being of your mind everywhere, especially against the high degrees of stress, both emotional and work-associated challenges that attack everyone today. He came to the conclusion that people of all persuasions have completely lost the knack of being able to step aside and have a good and free laugh at themselves. Therefore, the time has come for you to learn to laugh at yourself and live longer! Frank's effects of harrowing trauma, being attacked, mauled and carried away by a man-eating tiger and, curing himself of spreading melanoma cancer of the neck/shoulder, both lungs, liver and pancreas. He had been diagnosed by orthodox medicine as stage IV and given six months to live. He tuned to find an alternative cure. He has now been four years free of cancer. Frank devised a technique that even you, can benefit and learn to laugh at yourself. You have nothing to lose, except your overpowering seriousness. Frank spent three years delving into the properties of laughing at yourself. He even realised that there is more to laughing than showing a set of teeth. Laughing at yourself allows you the complete freedom to see stress and seriousness in their proper light, as a necessary part of lasting happiness. This is your opportunity to take a real look at yourself by using Frank's technique to step on the path towards learning the Art of Happiness. You either want to be free of stress and seriousness, or you do not! Your choice!

Successful Leadership in the Early Years Sep 19 2021 June O'Sullivan explores the concept of leadership, particularly with regards to leading Early Years centres. In line with government initiatives, there is growing pressure within the early years sector to create staff who can lead different types of childcare and family settings in order to address two main government targets. First, to support among families with small children and secondly, increasing educational opportunities for children from disadvantaged backgrounds in order to give them a better start in life. Many say that the best people to happen we need people who can lead an effective team of capable, professional colleagues. This is no easy task in the modern Early Years market. O'Sullivan acknowledges the problems and offers ideas and suggestions to address the issues facing leaders so that they are supported to lead us into a future where we can all help make a big difference for a long time.

Affect in Social Thinking and Behavior 24 2022 The role of affect in how people think and behave in social situations has been a source of fascination to laymen and philosophers since time immemorial. The book covers fundamental issues, such as the nature and relationship between affect and cognition, as well as chapters that deal with the cognitive antecedents of emotion, and the effect of affect for social cognition and behavior. This volume offers a highly integrated and comprehensive coverage of this field, and is suitable as a core textbook in advanced courses dealing with affect in social cognition and behavior.

Negotiating Communication Rights Dec 23 2021 Communication Rights is a key issue in contemporary societies, especially in a country like India, which faces major communication deficits. *Negotiating Communication Rights* explores some of the most important aspects of communication rights movements in India. Beginning with the theoretical aspects of communication rights, the book includes case studies related to significant movements of our times, namely, the Right to Information, Free and Open Source Software, Women and Media, Community Radio, and Citizen Journalism. It analyses the complexity of specific rights issues in India, such as women's rights, citizen activism and the role of media. The book explores the processes through which ordinary citizens find spaces for self-expression—a concept synonymous with media democratisation. The author argues for the need for streamlining of communication rights movements in India and for an Indian framework for communication rights.

Real Prophecy Unveiled Feb 22 2022 Religious hypocrites wage “holy war” while the faithful wait, expecting a Messiah / Christ / Buddha / Avatar / Imam Mahdi to come. Meanwhile, however, the prophecy is being fulfilled in a way they did not expect. As Jesus foretold, the present-day messenger of God was first rejected by his generation, but will now finally guide you unto all truth and salvation. As John wrote, he is of your brethren and has the testimony of Jesus. As Isaiah wrote, he will deliver judgment, but unlike Jesus he will not make his voice heard in public. It is his power that finally prove mightier than the sword, because the weapons of his warfare are not carnal but mighty through God for dealing with the forces of hate, greed, hypocrisy, intolerance, and injustice. Finally, is a voice with real authority, telling the truth that will expose the ignorance and hypocrisy of the “fundamentalist Religious Right,” make the greedy rich ashamed, bring low the proud, militant, and enable the humble and meek to inherit the earth. A New Reformation will enable all religions to serve their true purpose, and enable all governments to finally be of, for, and by the people. Then, rather than be divided by rivalry for the throne, we will all share the throne as equal joint heirs to God's New Kingdom, which shall be set up on the earth and last forever, never to be destroyed. That is what real prophecy foretells, and thus it shall be.

The Repugnant Conclusion 18 2021 Most people (including moral philosophers), when faced with the fact that some of their cherished moral views lead up to the Repugnant Conclusion, have to revise their moral outlook. However, it is a moot question as to how this should be done. It is not an easy thing to say how one should avoid the Repugnant Conclusion, without having to sacrifice more serious implications from one's basic moral outlook. Several such attempts are presented in this volume. This is the first volume devoted entirely to the cardinal problem of modern philosophy known as ‘The Repugnant Conclusion’. This book is a must for (moral) philosophers with an interest in population ethics.

The Paleo Perspective: The Plight of Prehistoric Man In Modern Times 2022 Is there a “caveman” buried deep inside each of us—one that we refuse to recognize? Do we have Paleolithic instincts and urges? How much of our behavior is a vestige from our hunter-gatherer past? Man does in fact have an ancient, Paleolithic genetic design. Indeed, human nature hasn't changed in nearly the last 200,000 years—but human society has changed drastically. Humans were designed to live in small communal groupings. The further away from this primitive setting that we find ourselves, the more likely it is that our genetically governed instincts will adequately serve us. Our deep-seated primitive instincts are ever-lurking in the background, obscured and obfuscated by the pervasive modern civilization—but extremely relevant nonetheless. By ignoring our Paleolithic design we fail to comprehend the nature of our modern predicament.

Our Brains at Work Apr 02 2020 “This chapter introduces people to the basics of what readers need to know about social psychology, i.e. the study of how people's feelings, ideas and behaviors are influenced by the presence of others. It also looks at the increasingly important bio/neural factors such as genes, brain structure and hormonal processes that are now being examined as relevant to any study of human behaviour, including group conflicts. In addition, it provides a brief introduction to the various methodologies that are increasingly able to measure social behavior using fMRI, electroencephalography, DNA analysis and hormonal testing”--

The Origins of Self Nov 09 2020 *The Origins of Self* explores the role that selfhood plays in defining human society, and each human individual in that society. It considers the genetic and evolutionary origins of self, the role that self plays in socialisation and language, and the types of self we generate in our individual journeys to and through adulthood. Edwardes argues that other widely held, relatively early evolutionary development, present throughout the primate clade and perhaps beyond, but self-awareness is a product of the sharing of social models, something only humans can do. The self of which we are aware is not something innate within us, it is a model of our self produced as a response to the models of us offered to us by other people. Edwardes proposes a new construction of selfhood involves seven different types of self. All but one of them are internally generated models, and the only non-model, the actual self, is completely hidden from conscious awareness. We rely on others to tell us about our self, and even to let us know we are a self.

The Biological Foundations of Organizational Behavior Mar 02 2020 When biological theories were used to understand behavior in the early 20th century, they were often poorly understood. In the 1950s, race, ethnicity, and IQ, and notions of social Darwinism, were based on a misunderstanding and an incomplete understanding of genetics and Darwin's theory of evolution by natural selection. However, a biological understanding of social behavior is an integral part of modern science, and increasingly used in the study of behavior in organizations. Yet, compared with other explanatory paradigms in organizational behavior, biological and evolutionary approaches are still relatively rare. *The Biological Foundations of Organizational Behavior* provides accessible insights for social scientists and practitioners in management and organizational behavior into what biology can offer their fields. Chapters contain enough background to orient readers who may have little knowledge of biology, and provide substantive contributions to advancing understanding of specific areas of biology and human behavior in organizations. They also show how the addition of biological theory and research to organizational-behavior scholarship will increase its explanatory and predictive power and contribute to its scientific foundations.

Steering Human Evolution Oct 09 2020 Humanity must steer its evolution. As human knowledge moves a step ahead of Darwin's theories, this book presents the emergence of human-made technologies and evolution shaping our alternative futures. This novel process poses fateful challenges to humanity, which require regulation of emerging science and technology which may endanger the future of our species. However, to do so successfully, a novel ‘humanity-craft’ has to be developed; main ideologies and institutions need redesign; national sovereignty has to be limited; a decisive global governance becomes essential; some reevaluation of widely accepted norms becomes essential; and a novel type of political leader, based on merit in addition to public support, is urgently needed. Taking the strength of nationalism and vested interests, it may well be that only catastrophes will teach humanity to metamorphose into a novel epoch without too high transition costs. But initial United Nation reforms, are urgent in order to contain calamities and may soon become feasible. Being both interdisciplinary and based on personal experience of the author, this book adds to the paradigm steering human evolution. It will be of great interest to scholars and researchers of modern history, evolution sciences, future studies, political science, philosophy of action, and technology. It will also be of wide appeal to the general reader anxious about the future of life on Earth. Comments on the Corona pandemic add to the book's concrete significance.

The Yi River Commentary on the Book of Changes Aug 26 2022 A translation of a key commentary on perhaps the most broadly influential text of classical China? This book is a translation of a commentary on the Book of Changes, or *Yijing* (I Ching), perhaps the most broadly influential text of classical China. The *Yijing* first appeared as a divination text in Zhou-dynasty China (ca. 6th-3rd bce) and later became a work of cosmology, philosophy, and political theory as commentators supplied it with new meanings. While many English translations of the *Yijing* itself exist, none has a historical commentary as thorough and methodical as that written by the Confucian scholar Cheng Yi, who turned the original text into a coherent work of political theory.

Poor Richard's Principle Feb 10 2021 The American Dream is in serious danger, according to Robert Wuthnow--not because of economic conditions, but because its moral underpinnings have been forgotten. In the past this vision was not simply a formula for success, but a moral perspective that framed our thinking about work and money in terms of broader commitments to family and humanitarian values. Nowadays, we are working harder than ever, and yet many of us feel that we are not realizing our higher aspirations as individuals or as a people. Here Wuthnow examines the struggles in which American families are now engaged as they try to balance work and family, confront the pressures of consumerism, and find meaning in their careers. He suggests that the book provides economic instruction and inspiration in the nation's past--in such figures as Benjamin Franklin, for instance, who was at once the prudent Poor Richard, the engaged public person, and the lover of life. Drawing on first-hand accounts from scores of people in all walks of life and from a national survey, the book shows that work and money cannot be understood in terms of their utility alone, but are inevitably rooted in our concepts of ourselves and in the symbolic rituals and taboos of everyday life. By examining these implicit cultural understandings of work and money, the book provides a foundation for bringing moral reasoning more fully to bear on economic decisions. It re-examines the moral arguments that were prominent earlier in our history, shows how they were set aside with the development of economic thinking, and suggests their continuing relevance in the lives of people who have effectively resisted the pressures of greater financial success. Demonstrating that most Americans do bring values implicitly to bear on their economic decisions, the book shows how some people are learning to do this more effectively and, in the process, gain more control over their work and finances. At a time when policymakers are raising questions about the very survival of the American dream, Poor Richard's Principle offers an analysis of how it can once again play a more prominent role in guiding our thinking.
