[The Focused Organization](#) Aug 20 2021 In [The Focused Organization](#) Antonio Nieto-Rodriguez shows you how fewer, more effectively elected and managed projects are the key to strategic and long-term success. Using his own research and work experience he explains how and why those organizations that focus on just a few key initiatives can perform significantly better than unfocused organizations, not only financially but also in achieving their strategic objectives and motivating their staff. The author introduces a new way of looking at a company through two very different and often conflicting dimensions: running-the-business and changing-the-business. What you add to one dimension you have to subtract from the other one. Finding the right balance between these two dimensions represents one of the major challenges to successful strategy execution. Becoming a focused organization involves a radical change in the way companies are organized and the way they select and manage projects - the creation of a new culture. [The Focused Organization](#) discusses the characteristics that comprise a focused organization. It describes key areas where a focused organization builds its levels of maturity; provides examples of focused organizations that outperform the rest; and explains in practical steps how all enterprises can become focused. The book finishes with a unique and inspiring case study that transports us to the early days of the current business world. Through the main character, Benny White, we learn how a business was conducted and how management evolved over decades with the introduction of business theories, including project management.

[Evaluation and Implementation of Distance Learning: Technologies, Tools and Techniques](#) Jan 25 2022 The twentieth century has seen the creation and evolution of technologies beyond imagination a century ago. The computer has enabled the digital presentation of knowledge, and increased the speed with which information can be captured and processed. The acceptance of these technologies has led to a new alternative for providing education and training-- distance learning. This book focuses on the processes, techniques and tools that are being used to successfully plan, implement and operate distance learning projects.

[Everyday Problem-Based Learning](#) Mar 03 2020 Educators know that problem-based learning answers that perennial student question: "When will I ever use this in real life?" Faced with a meaty problem to solve, students finally "get" why they need to learn the content and are energized to do so. But here's the exciting part: problem-based learning doesn't require weeks of study or an end-of-year project. In this book, Brian Pete and Robin Fogarty show how you can use problem-based learning as a daily approach to helping students learn authentic and relevant content and skills. They explain how to engage students in each of the seven steps in the problem-based learning model, so students learn how to develop good questions, launch their inquiry, gather information, organize their information, create evidence, present their findings, and assess their learning. Using practical examples, they also describe how to help students master these seven important thinking skills: develop, analyze, reason, understand, solve, apply, and evaluate. To put all this in context, the authors offer seven "PBL in a Nutshell" lessons that can easily be incorporated in a single classroom period. Depth of thinking and ease of implementation--this is problem-based learning at its best.

**Stone Tools and the Prehistory of the Northern Isles** Jun 17 2021 This volume explores the possibilities of using coarse stone assemblages from the Northern Isles of Scotland to observe aspects of social change throughout the prehistoric period. It draws together the available data on coarse stone artefacts, much of which is rather disparate, with a view to providing a standard work of reference for use to those excavators in the Northern Isles who, faced with a large coarse stone assemblage, require a description of the types of artefacts which occur as well as background information on their context and chronology. This is in part a synthesis as it combines proposals for standardised definitions of the various artefact types together with a record of occurrence. Of greater interest, however, is the use to which this information can then be put. By comparing the various artefacts with reference to their form, manufacture, use and deposition it is possible to perceive certain aspects of continuity and change within and between assemblages. This variability within the artefactual record is interpreted at a broader organisational level in order to assess the social implications that these patterns may represent. The period under investigation is from the Neolithic to the end of the Iron Age: from the beginning of the fourth millennium cal BC to 800 cal AD. The main part of this work is concerned with the Neolithic and Bronze Age, particularly the transition period between the two as, during this time, the use of stone for tools and other objects was at its peak.

**Robotic Systems: Concepts, Methodologies, Tools, and Applications** Mar 27 2022 Through expanded intelligence, the use of robotics has fundamentally transformed a variety of fields, including manufacturing, aerospace, medicine, social services, and agriculture. Continued research on robotic design is critical to solving various dynamic obstacles individuals, enterprises, and humanity at large face on a daily basis. [Robotic Systems: Concepts, Methodologies, Tools, and Applications](#) is a vital reference source that delves into the current issues, methodologies, and trends relating to advanced robotic technology in the modern world. Highlighting a range of topics such as mechatronics, cybernetics, and human-computer interaction, this multi-volume book is ideally designed for robotics engineers, mechanical engineers, robotics technicians, operators, software engineers, designers, programmers, industry professionals, researchers, students, academicians, and computer practitioners seeking current research on developing innovative ideas for intelligent and autonomous robotics systems.
