Storage Systems Apr 14 2021 Storage Systems: Organization, Performance, Coding, Reliability and Their Data Processing was motivated by the 1988 Redundant Array of Inexpensive/Independent Disks proposal to replace large form factor mainframe disks with an array of commodity disks. Disk loads are balanced by striping data into strips—with one strip per disk—and storage reliability is enhanced via replication or erasure coding, which at best dedicates k strips per stripe to tolerate k disk failures. Flash memories have resulted in a paradigm shift with Solid State Drives (SSDs) replacing Hard Disk Drives (HDDs) for high performance applications. RAID and Flash have resulted in the emergence of new storage companies, namely EMC, NetApp, SanDisk, and Purestorage, and a multibillion-dollar storage market. Key new conferences and publications are reviewed in this book. The goal of the book is to expose students, researchers, and IT professionals to the more important developments in storage systems, while covering the evolution of storage technologies, traditional and novel databases, and novel sources of data. We describe several prototypes: FAWN at CMU, RAMCloud at Stanford, and Lightstore at MIT; Oracle's Exadata, AWS' Aurora, Alibaba's PolarDB, Fungible Data Center; and author's paper designs for cloud storage, namely heterogeneous disk arrays and hierarchical RAID. • Surveys storage technologies and lists sources of data: measurements, text, audio, images, and video • Familiarizes with paradigms to improve performance: caching, prefetching, log-structured file systems, and merge-trees (LSMs) • Describes RAID organizations and analyzes their performance and reliability • Conserves storage via data compression, deduplication, compaction, and secures data via encryption • Specifies implications of storage technologies on performance and power consumption • Exemplifies database parallelism for big data, analytics, deep learning via multicore CPUs, GPUs, FPGAs, and ASICs, e.g., Google's Tensor Processing Units

Information Systems Design and Intelligent Applications Jun 28 2022 The third international conference on Information Systems Design and Intelligent Applications (INDIA – 2016) held in Visakhapatnam, India during January 8-9, 2016. The book covers all aspects of information system design, computer science and technology, general sciences, and educational research. Upon a double blind review process, a number of high quality papers are selected and collected in the book, which is composed of three different volumes, and covers a variety of topics, including natural language processing, artificial intelligence, security and privacy, communications, wireless and sensor

networks, microelectronics, circuit and systems, machine learning, soft computing, mobile computing and applications, cloud computing, software engineering, graphics and image processing, rural engineering, e-commerce, e-governance, business computing, molecular computing, nano-computing, chemical computing, intelligent computing for GIS and remote sensing, bio-informatics and bio-computing. These fields are not only limited to computer researchers but also include mathematics, chemistry, biology, bio-chemistry, engineering, statistics, and all others in which computer techniques may assist.

Operating System Concepts Essentials Aug 31 2022 By staying current, remaining relevant, and adapting to emerging course needs, *Operating System Concepts* by Abraham Silberschatz, Peter Baer Galvin and Greg Gagne has defined the operating systems course through nine editions. This second edition of the Essentials version is based on the recent ninth edition of the original text. *Operating System Concepts Essentials* comprises a subset of chapters of the ninth edition for professors who want a shorter text and do not cover all the topics in the ninth edition. The new second edition of Essentials will be available as an ebook at a very attractive price for students. The ebook will have live links for the bibliography, cross-references between sections and chapters where appropriate, and new chapter review questions. A two-color printed version is also available.

Gold und Herrschaft Jul 06 2020 Eine genaue Untersuchung von Gestalt und Funktion frühmittelalterlicher Königsschätze stellte bislang ein Desiderat der Mittelalterforschung dar. Auf der Basis historischer, archäologischer und literarischer Quellen untersucht M. Hardt die Kontexte, in denen königliche Schätze überliefert sind. Zunächst unternimmt er den Versuch, eine Vorstellung vom Inhalt frühmittelalterlicher Königsschätze und von der unterschiedlichen Beschaffenheit der darin angehäuften Gegenstände und Materialien zu vermitteln. Anschließend beschreibt er Herkunft und Aufbewahrung sowie die Bewegung des in den Schatz gelangenden und aus ihm abfließenden Edelmetalls und untersucht Wirkung und Wechselwirkung von königlichen Gaben im Umfeld des Herrschers, in denen neben der königlichen Repräsentation die hauptsächliche Funktion des Schatzes als Herrschaftsmittel evident wird. Material und Fragestellung erlauben einen europäischen Vergleich der Objekte und Einzelergebnisse. Ausgrabungen in Stadtkirche und Dreikönigskapelle Baden 1967/1968 Jul 18 2021

Integrity and Internal Control in Information Systems V Dec 11 2020 Integrity and Internal Control in Information Systems V represents a continuation of the dialogue between researchers, information security specialists, internal control specialists and the business community. The objectives of this dialogue are: -To present methods and techniques that will help business achieve the desired level of integrity in information systems and data; -To present the results of research that may be used in the near future to increase the level of integrity or help management maintain the desired level of integrity; -To investigate the shortcomings in the technologies presently in use, shortcomings that require attention in order to protect the integrity of systems in general. The book contains a collection of papers from the Fifth International Working Conference on Integrity and Internal Control in Information Systems (IICIS), sponsored by the International Federation for Information Processing (IFIP) and held in Bonn, Germany in November 2002.

Operating System Concepts Nov 02 2022 *Operating System Concepts*, now in its ninth edition, continues to provide a solid theoretical foundation for understanding operating systems. The ninth edition has been thoroughly updated to include contemporary examples of how operating systems function. The text includes content to bridge the gap between concepts and actual implementations. End-of-chapter problems, exercises, review questions, and programming exercises help to further reinforce important concepts. A new Virtual Machine provides interactive exercises to help engage students with the material.

Distributed Computer Systems Jan 30 2020 *Distributed Computer Systems: Theory and Practice* is a collection of papers dealing with the design and implementation of operating systems, including distributed systems, such as the amoeba system, argus, Andrew, and grapevine. One paper discusses the concepts and notations for concurrent programming, particularly language notation used in computer programming, synchronization methods, and also compares three classes of languages. Another paper explains load balancing or load redistribution to improve system performance, namely, static balancing and adaptive load balancing. For program efficiency, the user can choose from various debugging approaches to locate or fix errors without significantly disturbing the program behavior. Examples of debuggers pertain to the ada language and the occam

programming language. Another paper describes the architecture of a real-time distributed database system used for computer network management, monitoring integration, as well as administration and control of both local area or wide area communications networks. The book can prove helpful to programmers, computer engineers, computer technicians, and computer instructors dealing with many aspects of computers, such as programming, hardware interface, networking, engineering or design.

Computer Systems Architecture Sep 19 2021 Computer Systems Architecture provides IT professionals and students with the necessary understanding of computer hardware. It addresses the ongoing issues related to computer hardware and discusses the solutions supplied by the industry. The book describes trends in computing solutions that led to the current available infrastructures, tracing the initial need for computers to recent concepts such as the Internet of Things. It covers computers' data representation, explains how computer architecture and its underlying meaning changed over the years, and examines the implementations and performance enhancements of the central processing unit (CPU). It then discusses the organization, hierarchy, and performance considerations of computer memory as applied by the operating system and illustrates how cache memory significantly improves performance. The author proceeds to explore the bus system, algorithms for ensuring data integrity, input and output (I/O) components, methods for performing I/O, various aspects relevant to software engineering, and nonvolatile storage devices, such as hard drives and technologies for enhancing performance and reliability. He also describes virtualization and cloud computing and the emergence of software-based systems' architectures. Accessible to software engineers and developers as well as students in IT disciplines, this book enhances readers' understanding of the hardware infrastructure used in software engineering projects. It enables readers to better optimize system usage by focusing on the principles used in hardware systems design and the methods for enhancing performance.

Höhensiedlungen zwischen Antike und Mittelalter von den Ardennen bis zur Adria Sep 07 2020 In April 2004 a conference on Late Antique hilltop settlements was organised in Freiburg im Breisgau to mark excavations at such sites, in the Black Forest by the University of Freiburg and in North Italy by the University of Munich. In more than 20 contributions scholars from 10 countries presented the results of their own excavations in Late Antique and Early Medieval hilltop settlements, identifying similarities and differences. Not in every prehistorical or historical period were hilltops used as refuges or – since they were highly visible – for representational purposes, and these comparative studies were intended to analyse the military, political and social backgrounds. The results are presented in this volume together with a supplementary commentary.

The Evolution of Business in the Cyber Age Mar 26 2022 This book has a two-fold mission: to explain and facilitate digital transition in business organizations using information and communications technology and to address the associated growing threat of cyber crime and the challenge of creating and maintaining effective cyber protection. The book begins with a section on Digital Business Transformation, which includes chapters on tools for integrated marketing communications, human resource workplace digitalization, the integration of the Internet of Things in the workplace, Big Data, and more. The technologies discussed aim to help businesses and entrepreneurs transform themselves to align with today's modern digital climate. *The Evolution of Business in the Cyber Age: Digital Transformation, Threats, and Security* provides a wealth of information for those involved in the development and management of conducting business online as well as for those responsible for cyber protection and security. Faculty and students, researchers, and industry professionals will find much of value in this volume.

Database and Expert Systems Applications Aug 26 2019 This volume constitutes the proceedings of the 4th International Conference on Database and Expert Systems Applications (DEXA), held in Prague, Czech Republic, in September 1993. Traditionally the objective of the DEXA conferences is to serve as an international forum for the discussion and exchange of research results and practical experience among theoreticians and professionals working in the field of database and artificial intelligence technologies. Despite the fact that in the conference title the applications aspect is mentioned explicitly, the theoretical and the practical points of view in the field are well-balanced in the program of DEXA'93. The growing importance of the conference series is outlined by the remarkably high number of 269 submissions and by the support given by renown organizations. DEXA'93 is held for the first time outside the former GDR in an East-European country, and is essentially contributing to the advancement of the East-West scientific cooperation in the field of database and AI systems. This proceedings contains the 78 contributed papers carefully selected by an international program committee with the support of a high number of referees. The volume is organized in sections on data models, distributed databases, advanced database aspects, database

optimization and performance evaluation, spatial and geographic databases, expert systems and knowledge engineering, legal systems, other database and artificial intelligence applications, software engineering, and hypertext/hypermedia and user interfaces.

Distributed Information Resources Aug 19 2021 Since its first volume in 1960, *Advances in Computers* has presented detailed coverage of innovations in hardware and software and in computer theory, design, and applications. It has also provided contributors with a medium in which they can examine their subjects in greater depth and breadth than that allowed by standard journal articles. As a result, many articles have become standard references that continue to be of significant, lasting value despite the rapid growth taking place in the field.

Information and Business Intelligence Jan 12 2021 This two-volume set (CCIS 267 and CCIS 268) constitutes the refereed proceedings of the International Conference on Information and Business Intelligence, IBI 2011, held in Chongqing, China, in December 2011. The 229 full papers presented were carefully reviewed and selected from 745 submissions. The papers address topics such as communication systems; accounting and agribusiness; information education and educational technology; manufacturing engineering; multimedia convergence; security and trust computing; business teaching and education; international business and marketing; economics and finance; and control systems and digital convergence.

Reallexikon der germanischen Altertumskunde May 16 2021 Das Reallexikon der Germanischen Altertumskunde trägt den Namen seines Begründers, des Anglisten Naturwissenschaftlers Johannes Hoops. Zwischen 1972 und 2008 erschienen in zweiter, vollkommen veränderter Auflage 35 Bände sowie zwei Registerbände. Konzipiert als Handbuch, steht der Hoops in der Tradition umfangreicher Enzyklopädien: Ziel ist es, den gesamten Kenntnisstand zur Germanischen Altertumskunde umfassend und kritisch zu präsentieren. Sein interdisziplinärer Ansatz schließt Ergebnisse aus den Bereichen Kunstgeschichte, Rechtsgeschichte, Volkskunde und Religionswissenschaft mit ein.

GATE AND PGCET FOR COMPUTER SCIENCE AND INFORMATION TECHNOLOGY, Second Edition Feb 22 2022 Graduate Aptitude Test in Engineering (GATE) is one of the recognized national level examinations that demands focussed study along with forethought, systematic planning and exactitude. Postgraduate Engineering Common Entrance Test (PGCET) is also one of those examinations, a student has to face to get admission in various postgraduate programs. So, in order to become up to snuff for this eligibility clause (qualifying GATE/PGCET), a student facing a very high competition should excel his/her standards to success by way of preparing from the standard books. This book guides students via simple, elegant and explicit presentation that blends theory logically and rigorously with the practical aspects bearing on computer science and information technology. The book not only keeps abreast of all the chapterwise information generally asked in the examinations but also proffers felicitous tips in the furtherance of problem-solving technique. **HIGHLIGHTS OF THE BOOK** • Systematic discussion of concepts endowed with ample illustrations • Notes are incorporated at several places giving additional information on the key concepts • Inclusion of solved practice exercises for verbal and numerical aptitude to guide students from practice and examination point of view • Prodigious objective-type questions based on the past years' GATE examination questions with answer keys and in-depth explanation are available at https://www.phindia.com/GATE_AND_PGCET • Every solution lasts with a reference, thus providing a scope for further study The book, which will prove to be an epitome of learning the concepts of CS and IT for GATE/PGCET examination, is purely intended for the aspirants of GATE and PGCET examinations. It should also be of considerable utility and worth to the aspirants of UGC-NET as well as to those who wish to pursue career in public sector units like ONGC, NTPC, ISRO, BHEL, BARC, DRDO, DVC, Power-grid, IOCL and many more. In addition, the book is also of immense use for the placement coordinators of GATE/PGCET. **TARGET AUDIENCE** • GATE/PGCET Examination • UGC-NET Examination • Examinations conducted by PSUs like ONGC, NTPC, ISRO, BHEL, BARC, DRDO, DVC, Power-grid, IOCL and many more

Stream Data Processing: A Quality of Service Perspective Nov 09 2020 The systems used to process data streams and provide for the needs of stream-based applications are Data Stream Management Systems (DSMSs). This book presents a new paradigm to meet the needs of these applications, including a detailed discussion of the techniques proposed. It includes important aspects of a QoS-driven DSMS (Data Stream Management System) and introduces applications where a DSMS can be used and discusses needs beyond the stream processing model. It also discusses in detail the design and implementation of MavStream. This volume is primarily intended as a reference book for researchers and advanced-level students in computer science. It is also appropriate for practitioners in industry who are interested in developing applications.

Information Systems Architecture and Technology: Proceedings of 36th International Conference on Information Systems Architecture and Technology – ISAT

2015 – Part I Jan 24 2022 This four volume set of books constitutes the proceedings of the 36th International Conference Information Systems Architecture and Technology 2015, or ISAT 2015 for short, held on September 20–22, 2015 in Karpacz, Poland. The conference was organized by the Computer Science and Management Systems Departments, Faculty of Computer Science and Management, Wrocław University of Technology, Poland. The papers included in the proceedings have been subject to a thorough review process by highly qualified peer reviewers. The accepted papers have been grouped into four parts: Part I—addressing topics including, but not limited to, systems analysis and modeling, methods for managing complex planning environment and insights from Big Data research projects. Part II—discussing about topics including, but not limited to, Web systems, computer networks, distributed computing, and multi-agent systems and Internet of Things. Part III—discussing topics including, but not limited to, mobile and Service Oriented Architecture systems, high performance computing, cloud computing, knowledge discovery, data mining and knowledge based management. Part IV—dealing with topics including, but not limited to, finance, logistics and market problems, and artificial intelligence methods.

Introduction to Computing Applications in Forestry and Natural Resource Management Jun 16 2021 Due to the complexity of operational forestry problems, computing applications are becoming pervasive in all aspects of forest and natural resource management. This book provides a comprehensive introduction to computers and their applications in forest and natural resource management and is designed for both undergraduate and graduate students in forestry and natural resources. It introduces state-of-the-art applications for several of the most important computer technologies in terms of data acquisition, data manipulation, basic programming techniques, and other related computer and Internet concepts and applications. This book consists of six parts and 19 chapters.

Euro-Par 2000 Parallel Processing Mar 02 2020 Euro-Par – the European Conference on Parallel Computing – is an international conference series dedicated to the promotion and advancement of all aspects of parallel computing. The major themes can be divided into the broad categories of hardware, software, algorithms, and applications for parallel computing. The objective of Euro-Par is to provide a forum within which to promote the development of parallel computing both as an industrial technique and an academic discipline, extending the frontier of both the state of the art and the state of the practice. This is particularly important at a time when parallel computing is undergoing strong and sustained development and experiencing real industrial take up. The main audience for and participants of Euro-Par are seen as researchers in academic departments, government laboratories, and industrial organisations. Euro-Par's objective is to become the primary choice of such professionals for the presentation of new results in their specific areas. Euro-Par is also interested in applications that demonstrate the effectiveness of the main Euro-Par themes. Euro-Par now has its own Internet domain with a permanent Web site where the history of the conference series is described: <http://www.euro-par.org>. The Euro-Par conference series is sponsored by the Association of Computer Machinery and the International Federation of Information Processing.

Silver and Society in Late Antiquity Jun 24 2019 The spectacular hoards of late antique silver – Mildenhall, Thetford, Sevso – discovered since the middle of the last century have aroused much interest in this luxury art form. But what did these pieces mean to their owners, and why was silverware so important in late antiquity? *Silver and Society in Late Antiquity* examines such questions through an integrated, synthetic analysis of the history of silver in the Roman empire between 300 and 650 AD, focusing upon the cultural significance of this luxury art form in all its different manifestations—sacred, imperial and domestic. Ruth Leader-Newby looks at a wide range of objects from both the eastern and western halves of the Roman empire – including Britain – in order to determine silver's role in the wider sphere of late antique visual culture, asking questions about the relative significance of individual forms of artistic production, and their relationship with each other. In doing so, key issues for the artistic and cultural history of late antiquity are raised – the use of the imperial image, the visual construction of the sacred in Christianity, the cohesive social role of elite intellectual culture, and the Christianization of the domestic sphere. As this book demonstrates, when studied in its historical context, silver can substantially enrich our understanding of late Roman art and culture.

From Psychoanalytic Narrative to Empirical Single Case Research Dec 31 2019 Recognition of the need for empirical research and interest in its findings are growing in psychoanalysis. Many psychoanalysts now acknowledge that research is imperative to try to deal with the factors propelling the diminution in status and prestige of the discipline, as well as the number of patients in intensive psychoanalytic treatment. In addition, there is increased pressure to expose and acquit candidates with analytic research in the course of their education. *From Psychoanalytic Narrative to Empirical Single Case Research* revivifies the experimental potential of psychoanalysis by focusing

a number of structured research methods on a single case study. Drs. Kächele, Schachter, and Thomä, in tandem with the Ulm Psychoanalytic Process Research Study Group, bring their formidable tools and knowledge to bear on Amalia X, a former patient of Dr. Thomä's, whose case history is well-documented, preserved and available for formal empirical study. After providing an intensive review of the problematic aspects of clinical psychoanalytic research and an exegesis on the use of the case study itself, the specific case history of Amalia X, which dominates and centers the remainder of the book, is thoroughly examined. The following two chapters – utilizing clinical and linguistic models, respectively – deconstruct Amalia's psychopathology along a variety of methodological axes in an effort not only to uncover the roots of her presenting symptoms, but also to reify and validate the strange bedfellows of psychoanalysis and empiricism in general. The book would be incomplete, however, without its final chapter, which provides suggestions and insights into the clinical applications and implications of their combined research.

On the Move to Meaningful Internet Systems 2007: CoopIS, DOA, ODBASE, GADA, and IS Jul 26 2019 This two-volume set LNCS 4803/4804 constitutes the refereed proceedings of the five confederated international conferences on Cooperative Information Systems (CoopIS 2007), Distributed Objects and Applications (DOA 2007), Ontologies, Databases and Applications of Semantics (ODBASE 2007), Grid computing, high performance and Distributed Applications (GADA 2007), and Information Security (IS 2007) held as OTM 2007 in Vilamoura, Portugal, in November 2007. The 95 revised full and 21 revised short papers presented together with 5 keynote talks were carefully reviewed and selected from a total of 362 submissions. Corresponding with the five OTM 2007 main conferences CoopIS, ODBASE, GADA, and DOA, the papers are organized in topical sections on process analysis and semantics, process modeling, P2P, collaboration, business transactions, dependability and security, middleware and web services, aspects and development tools, mobility and distributed algorithms, frameworks, patterns, and testbeds, ontology mapping, semantic querying, ontology development, learning and text mining, annotation and metadata management, ontology applications, data and storage, networks, collaborative grid environment and scientific grid applications, scheduling, middleware, data analysis, scheduling and management, access control and authentication, intrusion detection, system and services security, network security, malicious code and code security, as well as trust and information management.

Hybrid Classifiers Jul 30 2022 This book delivers a definite and compact knowledge on how hybridization can help improving the quality of computer classification systems. In order to make readers clearly realize the knowledge of hybridization, this book primarily focuses on introducing the different levels of hybridization and illuminating what problems we will face with as dealing with such projects. In the first instance the data and knowledge incorporated in hybridization were the action points, and then a still growing up area of classifier systems known as combined classifiers was considered. This book comprises the aforementioned state-of-the-art topics and the latest research results of the author and his team from Department of Systems and Computer Networks, Wrocław University of Technology, including as classifier based on feature space splitting, one-class classification, imbalance data, and data stream classification.

Das Kurfürstentum Hannover und die Jahre der Fremdherrschaft 1803-1813 Oct 09 2020 Die französische Fremdherrschaft, die "Franzosenzeit" der Jahre 1803 bis 1813, war die Zeit, in welcher der französische Kaiser Napoleon I. Niedersachsen in sein Kaiserreich einverleibte und für seinen jüngsten Bruder, Jérôme Bonaparte, ein neues Königreich, das Königreich Westfalen, schuf. Es war die Zeit, in der der westliche Nachbar dem Hannoverland seinen Stempel aufdrückte, der gewiss in einigen Bereichen gute Einflüsse ausgeübt hat. Es war allerdings auch die Zeit, in der das hannoversche Volk für den verlustreichen Feldzug nach Moskau rekrutiert wurde, jenes schlimme Szenario, dem weit über die Hälfte der Teilnehmer aus Kurhannover zum Opfer fielen.
