[Regional Economic Development](#) Sep 08 2020 Originally published in 1988. Leading international researchers in regional economic development have contributed an integrated set of chapters reviewing the whole field and taking stock of current thinking. The book is in honour of François Perroux, the father of regional development theory, whose contributions to two important concepts in economics – time and space – have been substantial. The book comprises five parts. Part one covers Perroux's work in general and on growth poles in particular. Part two deals with 'the politics of place', population and regional development, techniques for regional policy analysis and a neoclassical approach to regional economics. In part three the Canadian scene is reviewed at national and regional levels. In part four chapters on urban development, small and medium-size cities, and capital grants deal with the experiences of other countries. Part five concludes the book with a chapter on growth poles, optimal size of cities, and regional disparities and government intervention.

National Competitiveness and Economic Growth Apr 03 2020 The current paradigm shift in the world economy is challenging the traditional competitiveness and growth theories with their few explanatory variables. This book offers a more holistic framework to synthesise the key findings of the various branches of competitiveness and growth research. The author illustrates this framework with a new long wave theory of socio-economic development. This theory emphasises the competitiveness and growth benefits of rapid structural adjustment in the rapidly changing techno-economic environment. Based on thorough analysis the author argues that both markets and governments have become less efficient due to the current transformation of the world economy. His empirical data from 22 OECD countries in the 1980s and 1990s illustrates that efficiency and growth-oriented governments have significantly contributed to their countries' economic success. National Competitiveness and Economic Growth will furnish its readers with a better understanding of the interdependencies of many important but seemingly unrelated aspects of modern economies and societies, for example the dynamics of business and technology, and cultural and institutional change. It will appeal to economists, business professionals and policymakers with a special interest in the competitiveness and growth of firms and national economies as well as the long-term development of socio-economic systems.

[Transitioning to Decent Work and Economic Growth](#) Jun 29 2022 According to the United Nations Development Program (UNDP) and the United Nations Conference on Trade and Development (UNCTAD), the private sector plays a key role in achieving the UN Sustainable Development Goals (SDGs). After all, sustainable and inclusive economic growth is essential to enable more people to participate in global prosperity. Encouraging entrepreneurship and job creation are key to SDG 8, as are effective measures to eradicate forced labor, slavery, and human trafficking. Since more than 90 percent of jobs are created by the private sector, more attention must be paid to entrepreneurs that help create dynamic and responsible enterprises that often generate positive externalities for society and the environment through investments in scalable innovations and a commitment to local embeddedness. As such, they help lift people out of poverty through new and relatively well-paid jobs and enable local economies to become more sustainable through global value chain integration.

[Transitioning to Decent Work and Economic Growth](#) explores the prospects for SDG 8 in the Global South as well as the Global North. It especially considers the positive role the private sector may play as an enabler of human rights, creator of decent work and engine for inclusive development in different contexts. Further, it examines how the institutional environment can facilitate economic change, which may lead to social empowerment and enhanced economic opportunities. A key question the volume explores, is how—in an entrepreneurial context—innovation and scientific knowledge contribute to the creation of scalable innovation that help to de-couple economic growth from the use of natural resources. [Transitioning to Decent Work and Economic Growth](#) is part of MDPI's new Open Access book series [Transitioning to Sustainability](#). With this series, MDPI pursues environmentally and socially relevant research which contributes to efforts toward a sustainable world. [Transitioning to Sustainability](#) aims to add to the conversation about regional and global sustainable development according to the 17 SDGs. The book series is intended to reach beyond disciplinary, even academic boundaries. For use of the SDG logos and design, please see the according [Guidelines for the use of the SDG logo, color wheel, and 17 icons](#).

[The New Introduction to Geographical Economics](#) Feb 11 2021 Geographical economics starts from the observation that economic activity is clearly not

randomly distributed across space. This revised and updated introduction to geographical economics uses the modern tools of economic theory to explain the who, why and where of the location of economic activity. The text provides an integrated, first-principles introduction to geographical economics for advanced undergraduate students and first-year graduate students, and has been thoroughly revised and updated to reflect important developments in the field, including new chapters on alternative core models and policy implications. It presents a truly global analysis of issues in geographical economics using case studies from all over the world, including North America, Europe, Africa and Australasia, and contains many computer simulations and end-of chapter exercises to encourage learning and understanding through application.

Southern China Jul 31 2022 This volume examines contemporary Asian industry, by concentrating on one of the key locations of global manufacturing: Southern China.

International Technology Transfer and Catch-up in Economic Development Nov 22 2021 Reappraises the role of international technology transfer in economic development in light of the globalization of the world economy. Provides an overview and historiography of technology transfer mechanisms, then discusses new technology transfer issues, particularly "sourcing," which have emerged as a result of increasing globalization, leading to an increased understanding of how developing economies and economies in transition could approach technology transfer policy in an increasingly globalized and open economic environment. Radosevich is a research fellow with SPRU, Science and Technology Policy Research at the University of Sussex, UK. Annotation copyrighted by Book News, Inc., Portland, OR

The Oxford Handbook of Industrial Hubs and Economic Development Aug 27 2019 Industrialization supported by industrial hubs has been widely associated with structural transformation and catch-up. But while the direct economic benefits of industrial hubs are significant, their value lies first and foremost in their contribution as incubators of industrialization, production and technological capability, and innovation. The Oxford Handbook of Industrial Hubs and Economic Development adopts an interdisciplinary approach to examine the conceptual underpinnings, review empirical evidence of regions and economies, and extract pertinent lessons for policy researchers and practitioners on the key drivers of success and failure for industrial hubs. This Handbook illustrates the diverse and complex nature of industrial hubs and shows how they promote industrialization, economic structural transformation, and technological catch-up. It explores the implications of emerging issues and trends such as environmental protection and sustainability, technological advancement, shifts in the global economy, and urbanization.

Water, cereals and economic growth Oct 22 2021

Endogenous Development Oct 10 2020 The beginning of the twenty first century has been characterized by the expansion of economics, politics and institutional relations. Using international case studies, this book illustrates the local answer to the challenge of increasing competition. The book introduces the idea of endogenous development, identifying the theoretical roots and defining its main features. It then goes on to indicate how this concept can be used to understand economic dynamics, and to show how the concept is relevant in economic analysis and policy implementation in times of globalization. This work will be of essential interest to academics and policy-makers in planning and development economics.

Unsere gemeinsame Zukunft, Jan 01 2020

Regimes, Politics, and Markets Mar 03 2020 This ambitious study, by a leading Spanish social scientist, analyses the mutual relationships between politics and the economy. Focusing on the experiences of Southern and Eastern Europe, it examines the complex interdependence between democracies, economic growth, social redistribution, and political culture. Are democratization processes the product of previous experiences of development, or of economic crisis? Can political regimes influence economic development and the distribution of material resources? In a context of economic constraints, to what extent are social democratic governments able to present a distinct identity in their policies? And can democratic governments, once established, increase support for democratic principles? Professor Maravall explores these and other crucial questions utilizing a wealth of evidence from official statistics to public opinion polls. His appendices also provide chronologies of the most influential studies on these topics, offering valuable background information and ideas for further reading.

The Role of the Bophuthatswana National Development Corporation in the Economic Development of Bophuthatswana Mar 15 2021

The Theory and Experience of Economic Development Oct 29 2019 This volume, first published in 1982, is a collection of original essays written to honour Professor W. Arthur Lewis, 1979 co-winner of the Nobel Prize in economics. The authors, an international group of distinguished scholars, address a varied set of specific issues reflecting Professor Lewis' research interests, covering topics which include: technological change in agriculture, analyses of unemployment and income distribution, the role of government policy in the development process, the historical record of development, and the relationship between developed and developing nations. The book will be of interest to both the academic researcher and practicing professionals in the international organisations and national governments, and are particularly appropriate to graduate courses in economic development, cost-benefit analysis and economic history.

Principles of Microeconomics Sep 28 2019 Now readers can master the principles of microeconomics with the help of the most popular introductory book in economics today that is widely used around the world -- Mankiw's PRINCIPLES OF MICROECONOMICS, 8E. With its clear and engaging writing style, this book emphasizes only the material that readers are likely to find most interesting about the economy, particularly if they are studying economics for the very first time. Reader discover interesting coverage of the latest relevant microeconomic developments with real-life scenarios, useful economic facts, and

clear explanations of the many ways microeconomic concepts play a role in the decisions that individuals make every day. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Challenges in Economic Policy, Business and Management in the COVID-19 Era Apr 27 2022 The COVID-19 pandemic has made it necessary to redefine the most significant challenges faced by individual economies and society today. It contributed to the change of contemporary social, technological and economic trends, the effects of which will indeed be the subject of many scientific studies in the coming years. As the pandemic progresses, it promotes reflection and summaries of the consequences of behaviors or omissions in each country. One of them is a synthetic presentation of ten lessons from the pandemic (Gorynia, 2021), which the professor accurately diagnoses in the economic context: 1) the pandemic as a non-economic (sanitary-medical) shock that caused the economic, social and political crisis; 2) the pandemic as a "black swan", an unpredictable threat of high species gravity, but requiring anticipation to minimize its harmful effects in the future; 3) determining the causes of the appearance of the virus determines different preventive actions for future threats; 4) resilience as the foundation of long-term economic efficiency; 5) the set of measures to counteract the harmful effects of a pandemic should not be unified but adapted to the specificity of the facilities it is to affect; 6) the world economy as a system of vessels connected with its positive and negative consequences; 7) the pandemic highlighted the role of coordination of international cooperation; the shortcomings of globalization must be overcome by fairly sharing the positive fruits of international cooperation and resilience aimed at diversifying supplies; 8) economic policy pursued by individual states with a view to preventing the effects of the economic crisis caused by a pandemic cannot be voluntary; 9) the pandemic has sharpened the perception of the shortcomings of contemporary economic, social and political systems and prompts the questioning of certain pillars of the market economy (e.g., homo oeconomicus, individual and global rationality, private and state property, canons of monetary, fiscal, budgetary or industrial policy); 10) the pandemic increases the pressure on systemic and holistic thinking taking into account green economic development, saving energy, water and other resources, using renewable energy sources, avoiding wastage of resources, paying attention to social inequalities in the world, regions and countries, solving poverty problems, and social exclusion. This monograph is partially a response to the in-depth issues covered in these lessons. The authors of individual chapters challenge contemporary topics relating to the COVID-19 pandemic, industry and inter-organizational cooperation, pro-environmental, resilient, and innovative organizations. The monograph consists of three parts. The first part (PART 1) covers an overview of very recent research, considering the impact of COVID-19 on the economy, industries, and business. The article by Anna Ujwara-Gil and Bianka Godlewska-Dziobo deals with, among others, the issues relating to pandemic impacts on the slowdown in the functioning of the construction, electric automotive, and water industries. Also, it affects the tourist industry, where countries are starting to pay attention to the resource-saving green economy and problems of professional exclusion in the pandemic era. In another article, Maria Czech refers to the influence of public debt on the volatility of spreads during the COVID-19 pandemic. This research is part of the study on the use of sovereign credit default swap spreads to assess a country's credit risk, which may be distorted in a pandemic period. It is undisputed that the COVID-19 pandemic has a global dimension. The crisis resulting from disorders such as in value chains has caused industry to slow down. The Czech luxury fashion industry is no exception. As Radka MacGregor Pelikánová points out, COVID-19 has turned out to be a threat to its development. Leading Czech luxury fashion companies withdrew to a passive role and felt the negative consequences of the pandemic. As the Author points out, few have engaged in corporate social responsibility and showed ingenuity, which increases their chances of survival in the future. In other studies, Tereza Horáková and Kateřina Maršíková identified factors influencing the environment of effective knowledge exchange in SMEs, which in the era of hybrid work during COVID-19, is particularly important. The second part of the monograph (PART 2) includes two studies on the photovoltaic cell industry in China from the perspective of comparative and intra-industry advantage. As a significant player in the global trade scene and various value chains, China is a fascinating subject of research undertaken by Paweł Brusilo and Bogusław Drelich-Skulska. The results of the first article demonstrate the success of the Chinese industry in terms of growth potential, competitiveness, and development opportunities thanks to effective state support and favorable market forces. As the authors point out, the Chinese solar cell industry has not been studied so far in the context of comparative advantage and the new structural economy. The results show the way for other countries to consider or develop innovative industries, such as renewable energy and solar energy. In the second article, Paweł Brusilo examines the topic of the Belt and Road Initiative in the context of the Chinese photovoltaic cell industry, energy transition policy, identification of modern intra-industry trade patterns and opportunities for this industry, which is characterized by significant state interventionism. The considerations in this article may inspire EU countries to deepen economic and trade cooperation in the export and import of solar cells with China. On the other hand, Joanna Kurowska-Pysz has undertaken the analysis of the cooperation conditions within the innovative processes of representatives of science, business, the legislative, and economic environment cooperating on the capital market. The Author focused on the motivators, barriers, but also the search for an effective form of development of intersectoral cooperation enabling the exchange of knowledge and experience, learning, including the flow of personnel between sectors, joint organization of conferences, seminars, training, and implementation of research projects constituting the basis of innovative processes, or the diagnosis of network relationships. The model proposed by the Author will surely inspire other researchers. The third part of the monograph (PART 3) includes articles referring, inter alia, to the pro-environmental organizational culture of enterprises. Katarzyna Piwowski-Sulej, as an advocate of this valuable orientation today, has shown that organizations are interested in developing pro-ecological behavior and are aware of their impact on the natural environment. The article is in line with the global trend focused on the sustainable, ecological, and green economy enterprises operating in this trend, not only because of COVID-19. Taking action to develop a pro-ecological organizational culture, taking care of the natural environment is not only a moral and ethical requirement but also an obligation for the future generation. This part also includes an article by Piotr Tomszys and Bartosz Gruzca, who present an inspiring model of organizational resilience and an attempt to operationalize it. The organizational resilience model proposed by the Authors is in line with the growing interest in the analyzes and measurement of the enterprises' resilience. The conceptualization and measurement of economic resilience can inspire other researchers to further research in this area. The COVID-19 pandemic, as an unpredictable and destructive shock, might be a unique opportunity to verify the developed model, as the authors point out. The last article deals with the issue of innovative management and its measurement based on a proprietary tool developed by Magdalena Gorzelany-Dziadkowiec. The considerations undertaken by the Author are a reliable starting point for further research concerning the impact of COVID-19 on the organization's functioning, the development of innovative management, changes in work processes, and interpersonal relations in the era of increasingly dominant digital technology and skills to use it. The editors profoundly thank all the Authors for their valuable contribution to this monograph and cooperation in its co-creation. We address our grateful thanks to all the Reviewers for their insightful evaluation and high standards of their work. These special thanks go to (in alphabetical order) Barbara Błaszczak Institute of Economics, Polish Academy of Sciences; Justyna Bugaj, Jagiellonian University; Anna Fornalczyk, COMPER Fornalczyk and Wspólnicy; Marta Gancarczyk, Jagiellonian University; Anna Maria Lis, Gdańsk University of Technology; Andrzej Lis, Nicolaus Copernicus University; Mieczysław Morawski, Warsaw University of Technology; Paweł Pisany, Institute of Economics, Polish Academy of Sciences; Natalia R. Potoczek, Institute of Economics, Polish Academy of Sciences. We also thank Paweł Japo for his thorough proofreading of this monograph.

Quest for Inclusive Growth in Bangladesh Feb 23 2022 This book offers a selection of intensely researched essays focused on the critical planning objectives and policy priorities that would enhance the promotion of inclusive growth in a developing country. It has taken Bangladesh as the case study. It argues for rethinking of traditional policies and provides arguments and ways to reorient these toward inclusive growth and better social inclusion. These involve a dedicated focus on employment and inclusion in the design of monetary and fiscal policies, trade and industrial policies, policies toward rural non-farm employment, social protection and safety net strategy and the nature of institutional and governance reforms which are imperative for ensuring inclusive growth. The studies included in the book were prepared before or at the onset of the ongoing COVID-19 pandemic and the unfolding economic crisis; yet they provide cursory observations on its likely impact, and underscore how the stated principles and policies of an inclusive growth strategy have become even more significant in the present situation. Bangladesh has been growing respectably during the past decade and a half and has arguably shown strong progress in several social indicators. However, inequality and vulnerability are rising alarmingly, and the economy is beset with high levels of corruption, as well as with various other governance deficits that can adversely affect future growth and social inclusion. The book provides a critical assessment of how far growth in Bangladesh has been inclusive, both over time, and in comparison to selected South and Southeast Asian countries. It constructs a specific 'inclusive growth index' with reference to what the study considers as the significant goals and pillars of inclusive growth. Bangladesh is not the only developing country that is faced with the arduous task of tackling unbalanced economic growth and of implementing the 2030 Agenda. Rising vulnerability, inequality, disappointing job growth and poor governance are also major challenges to inclusive growth for many countries in the Global South. Therefore, the appeal of this book extends

well beyond the borders of Bangladesh and the South Asian region. Corresponding to SDG 8, the book is aimed at academia, researchers, policymakers, civil society leaders as well as other national and international development practitioners with an avid interest in issues concerning growth with equity, and in sync with the 2030 Agenda for Sustainable Development. In addition, the book is a valuable resource for interested students of disciplines related to economics and development policy.
