Methodological Approaches to STEM Education Research Volume 3 Jun 20 2019 We live in challenging and uncertain times, with profound

implications for the purpose and nature of education. The crises of the Anthropocene, with the related climate-related challenges, biodiversity loss, a global pandemic, and changes to the world of work driven by science and technology innovation and the ascendancy of data and knowledge, pressure us to rethink how we prepare people for such futures. This, in turn, has changed the landscape of educational research, perhaps particularly in the areas of mathematics, health and environmental education research that are so central to responding to these global pressures and potential solutions. We need to think critically about education research design and practice as part of a considered and robust discussion of education research theory and practice that will inform and help shape education systems into the future. This volume responds to these challenges, casting fresh light on contemporary methodologies fit for reconsidering education into the future. Chapters explore post-qualitative inquiry, with overviews and practices, arts-based and interdisciplinary methodologies, self-study and auto-ethnography for the Anthropocene, co-design with teachers, researching for system change, the ethics of 'netnography', and principles and practices of literature review.

Modern Spanish Grammar Jun 13 2021 Modern Spanish Grammar: A Practical Guide is an innovative reference guide to Spanish, combining traditional and function-based grammar in a single volume. The Grammar is divided into two parts. The shorter section covers traditional grammatical categories such as word order, nouns, verbs and adjectives. The larger section is carefully organized around language functions and notions such as: giving and seeking information putting actions into context * expressing likes, dislikes and preferences comparing objects and actions. All grammar points and functions are richly illustrated and information is provided on register and relevant cultural background. Written by experienced teachers and academics, the Grammar has a strong emphasis on contemporary usage. Particular attention is paid to indexing and cross-referencing across the two

sections. This is the ideal reference grammar for learners of Spanish at all levels, from elementary to advanced. It will prove invaluable to those with little experience of formal grammar, as no prior knowledge of grammatical terminology is assumed and a glossary of terms is provided. Anglicans, Dissenters and Radical Change in Early New England, 1686–1786

Feb 09 2021 This book considers three defining movements driven from London and within the region that describe the experience of the Church of England in New England between 1686 and 1786. It explores the radical imperial political and religious change that occurred in Puritan New England following the late seventeenth-century introduction of a new charter for the Massachusetts Bay Colony, the Anglican Church in Boston and the public declaration of several Yale 'apostates' at the 1722 college commencement exercises. These events transformed the religious circumstances of New

England and fuelled new attention and interest in London for the national church in early America. The political leadership, controversial ideas and forces in London and Boston during the run-up to and in the course of the War for Independence, was witnessed by and affected the Church of England in New England. The book appeals to students and researchers of English History, British Imperial History, Early American History and Religious History.

Handbook of Climate Change and Biodiversity Dec 27 2019 This book comprehensively describes essential research and projects on climate change and biodiversity. Moreover, it includes contributions on how to promote the climate agenda and biodiversity conservation at the local level. Climate change as a whole and global warming in particular are known to have a negative impact on biodiversity in three main ways. Firstly, increases in temperatures are detrimental to a number of organisms, especially those in sensitive habitats such as coral reefs and rainforests. Secondly, the pressures posed by a changing climate may lead to sets of responses in areas as varied as phenology, range and physiology of living organisms, often leading to changes in their lifecycles (especially but not only in reproduction), losses in productivity or even death. In some cases, the very survival of very sensitive species may be endangered. Thirdly, the impacts of climate change on biodiversity will be felt in the short term with regard to some species and ecosystems, but also in the medium and long term in many biomes. Indeed, if left unchecked, some of these impacts may be irreversible. Many individual governments, financial institutes and international donors are currently spending billions of dollars on projects addressing climate change and

biodiversity, but with little coordination. Quite often, the emphasis is on adaptation efforts, with little emphasis on the connections between physio-ecological changes and the lifecycles and metabolisms of fauna and flora, or the influence of poor governance on biodiversity. As such, there is a recognized need to not only better understand the impacts of climate change on biodiversity, but to also identify, test and implement measures aimed at managing the many risks that climate change poses to fauna, flora and micro-organisms. In particular, the question of how to restore and protect ecosystems from the impact of climate change also has to be urgently addressed. This book was written to address this need. The respective papers explore matters related to the use of an ecosystem-based approach to increase local adaptation capacity, consider the significance of a protected areas network in preserving biodiversity in a changing northern European climate, and assess the impacts of climate change on specific species, including wild terrestrial animals. The book also presents a variety of case studies such as the Yellowstone to Yukon Conservation Initiative, the effects of climate change on the biodiversity of Aleppo pine forest in Senalba (Algeria), climate change and biodiversity response in the Niger Delta region, and the effects of forest fires on the biodiversity and the soil characteristics of tropical peatlands in Indonesia. This is a truly interdisciplinary publication, and will benefit all scholars, social movements, practitioners and members of governmental agencies engaged in research and/or executing projects on climate change and biodiversity around the world.
