Integrated Maintenance and Energy Management in the Chemical Industries Dec 24 2019 This book provides guidelines to ensure a safe and smooth running chemical production plant. It presents in detail such important considerations as selection of proper technology with efficient machinery (for a new plant) or expansion / diversification of existing plants for manufacture of more products for safe and pollution-free operation. This book also provides guidelines for improved plant layout, and selection of raw materials to reduce pre-processing costs prior to feeding to process units. The book further examines procuring better inputs (such as catalysts, filter cloths, tower internals etc) required for smooth plant operation and better product quality for client satisfaction, enhanced process control through suitable instrumentation, and preventive maintenance. Typical conflicts arising in production units due to different priorities among sales departments, purchasing departments, production engineers, and maintenance engineers are addressed. The book also suggests methods to reduce the loss of energy during start up and shutdowns, increase equipment life, and prevent environmental pollution. Case studies are included in appropriate chapters.

Competition Law of the European Union Apr 08 2021 This new Sixth Edition of a major work by the well-known competition law team at Van Bael & Bellis in Brussels brings the book up to date to take account of the many developments in the case law and relevant legislation that have occurred since the Fifth Edition in 2010. The authors have also taken the opportunity to write a much-extended chapter on private enforcement and a dedicated section on competition law in the pharmaceutical sector. As one would expect, the new edition continues to meet the challenge for businesses and their counsel, providing a thoroughly practical guide to the application of the EU competition rules. The critical commentary cuts through the theoretical underpinnings of EU competition law to expose its actual impact on business. In this comprehensive new edition, the authors examine such notable developments as the following: important rulings concerning the concept of a restriction by object under Article 101; the extensive case law in the field of cartels, including in relation to cartel facilitation and price signalling; important Article 102 rulings concerning pricing and exclusivity, including the Post Danmark and Intel judgments, as well as standard essential patents; the current block exemption and guidelines applicable to vertical agreements, including those applicable to the motor vehicle sector; developments concerning online distribution, including the Pierre Fabre and Coty rulings; the current guidelines and block exemptions in the field of horizontal cooperation, including the treatment of information exchange; the evolution of EU merger control, including court defeats suffered by the Commission and the case law on procedural infringements; the burgeoning case law related to pharmaceuticals, including concerning reverse payment settlements; the current technology transfer guidelines and block exemption; procedural developments, including in relation to the right to privacy, access to file, parental liability, fining methodology, inability to pay and hybrid settlements; the implementation of the Damages Directive and the first interpretative rulings. As a comprehensive, up-to-date and above all practical analysis of the EU competition rules as developed by the Commission and EU Courts, this authoritative new edition of a classic work stands alone. Like its predecessors, it will be of immeasurable value to both business persons and their legal advisers.
