[Machine Learning and Big Data Analytics Paradigms: Analysis, Applications and Challenges](#) Aug 01 2022 This book is intended to present the state of the art in research on machine learning and big data analytics. The accepted chapters covered many themes including artificial intelligence and data mining applications, machine learning and applications, deep learning technology for big data analytics, and modeling, simulation, and security with big data. It is a valuable resource for researchers in the area of big data analytics and its applications.

[Twenty Lectures on Algorithmic Game Theory](#) Apr 28 2022 Computer science and economics have engaged in a lively interaction over the past fifteen years, resulting in the new field of algorithmic game theory. Many problems that are central to modern computer science, ranging from resource allocation in large networks to online advertising, involve interactions between multiple self-interested parties.

Economics and game theory offer a host of useful models and definitions to reason about such problems. The flow of ideas also travels in the other direction, and concepts from computer science are increasingly important in economics. This book grew out of the author's Stanford University course on algorithmic game theory, and aims to give students and other newcomers a quick and accessible introduction to many of the most important concepts in the field. The book also includes case studies on online advertising, wireless spectrum auctions, kidney exchange, and network management.

[Thorium—Energy for the Future](#) May 30 2022 This book comprises selected proceedings of the ThEC15 conference. The book presents research findings on various facets of thorium energy, including exploration and mining, thermo-physical and chemical properties of fuels, reactor physics, challenges in fuel fabrication, thorium fuel cycles, thermal hydraulics and safety, material challenges, irradiation experiences, and issues and challenges for the design of advanced thorium fueled reactors. Thorium is more abundant than uranium and has the potential to provide energy to the world for centuries if used in a closed fuel cycle. As such, technologies for using thorium for power generation in nuclear reactors are being developed worldwide. Since there is a strong global thrust towards designing nuclear reactors with thorium-based fuel, this book will be of particular interest to nuclear scientists, reactor designers, regulators, academics and policymakers.

[Testing Lecture Comprehension Through Listening-to-summarize Cloze Tasks](#) Mar 04 2020 This book explores the effectiveness of listen-to-summarize tasks as a tool to assess lecture comprehension ability. It especially focuses on listen-to-summarize tasks that represent listeners' meaning building and the discourse construction of the lecture for listening assessment purposes. It discusses in depth the nature of lecture comprehension and introduces the approaches to assessing it. It also presents teachers' and students' perceptions of listen-to-summarize task demands and their respective implications. By observing interactions between test-takers' cognitive processes and the task itself, the book explores the effectiveness of these tasks. It also examines the discrepancy in cognitive processes between different language competence levels in detail, shedding light upon current research on lecture comprehension assessment and offering insights into listening comprehension instruction.

[Lectures and Essays](#) Mar 28 2022

[New Trends and Challenges in Information Science and Information Seeking Behaviour](#) Jun 30 2022 This book proposes a series of recent researches which introduce new topics and concepts to the field of information science. The contribution of information science to society in the context of the fourth Industrial Revolution and of the UN Agenda 2030, a new concept of disnormative information, the negative effects in information behavior, especially regarding criminal activities in Tor network and Japanese hikikomori phenomenon, fake news and hate speech from a library and information science perspective as well as gamification in libraries but also the new notion of jamography are all discussed in the book. Intended for information specialists and researchers, librarians and library and information science students, the book analyzes how people use information, which are their needs and how they satisfy them in the modern digital world. The book is also aimed as a scientific reference for the initial and continuous training of students and specialists in libraries and information services.
