Computer Applications for Graphics, Grid Computing, and Industrial Environment May 29 2022 This volume constitutes the refereed proceedings of the International Conferences, FGCN and DCA 2012, held as part of the Future Generation Information Technology Conference, FGIT 2012, Kangwondo, Korea, in December 2012. The papers presented were carefully reviewed and selected from numerous submissions and focus on the various aspects of grid and distributed computing, industrial environment, safety and health, and computer graphics, animation and game.

Positive Organizational Behavior Jun 05 2020 Positive Organizational Behaviour is emerging as a truly contemporary movement within the classic discipline of organizational behaviour. The best work of leading scholars is gathered together in one edited collection. Chapters study the states, traits and processes that compromise this exciting

new science. In addition to mapping the field, this collection goes one step further and invites noted experts to identify the methodological challenges facing scholars of Positive Organizational Behaviour. Positive Organizational Behaviour constitutes the study of positive human strengths and competencies, how it can be facilitated, assessed and managed to improve performance in the workplace. Its roots are firmly within positive psychology but transplanted to the world of work and organizations. This book showcases the cutting edge of this an exciting and challenging new area within Organizational Behaviour. It should be read by anyone who is interested in extending their knowledge of this field. Debra Nelson has a website at <http://www.nelsonquickgroup.com>

Virtue, Emotion and Imagination in Law and Legal Reasoning Jun 25 2019 What is the role and value of virtue, emotion and imagination in law and legal reasoning? These new essays, by leading scholars of both law and philosophy, offer striking and exploratory answers to this neglected question. The collection takes a holistic approach, inquiring as to the connections and relations between virtue, emotion and imagination. In addition to the principal focus on adjudication, essays in the collection also engage with a variety of different legal, political and moral contexts: eg criminal law sentencing, the Black Lives Matter movement and professional ethics. A number of different areas of the law are addressed (eg criminal law, constitutional law and tort law) and the issues explored include: the benefits and limits of empathy in legal reasoning; the role of attention and perception in judicial reasoning; the identification of judicial

virtues (such as compassion and humility) and judicial vices (such as callousness and partiality); the values and dangers of certain imaginative devices (eg personification); and the interactive and social dimensions of virtue, emotion and imagination.

Bedeutung, Entwicklung und Wirkungen "emotionaler Ansteckung" in Organisationen May 17 2021 Diplomarbeit aus dem Jahr 2007 im Fachbereich Führung und Personal - Sonstiges, Note: 1,3, FernUniversität Hagen, Sprache: Deutsch, Abstract: Obwohl es der vorherrschenden Sichtweise von Organisationen widerspricht, gibt kein Arbeitnehmer seine Emotionen an der Eingangstür seiner Arbeitsstätte ab. Diese Emotionen wechseln mit subtilen Mechanismen von einem Individuum zum anderen und wirken sozialisierend, indem sie es Menschen ermöglichen, in Interaktion eine geteilte Wirklichkeit zu erzeugen. Diese Arbeit beschäftigt sich mit dem wechselseitigen Phänomen der emotionalen Ansteckung (emotional contagion). Es beschreibt die Tendenz, den eigenen Gesichtsausdruck, die Bewegung, die Körperhaltung und die Stimmlage, an die eines Interaktionspartners anzupassen, bzw. den Interaktionspartner zu imitieren. Eine wesentliche Folge dieser Imitation ist die emotionale Verschmelzung der Interaktionspartner. Emotionale Ansteckung ist ein Produkt fast jeder zwischenmenschlichen Interaktion. Es ist ein ganz alltägliches Phänomen und beruht zumeist auf unbewussten physiologischen Vorgängen. Daher ist für Organisationen zunächst nicht die emotionale Ansteckung als solche relevant, sondern die Folgen, die aus ihr erwachsen. Denn in Organisationen wirken nicht nur Emotionen, die dem

Organisationszweck dienen. Emotionen erzeugen mitunter eine Dynamik, die schnell außer Kontrolle gerät. Ihre subtile Wirkung und die Latenz ihrer Anwesenheit machen sie als Instrumente der betriebswirtschaftlichen Lenkung anscheinend inakzeptabel. Paradoxerweise ist es zeitgleich die Aufgabe von Heerscharen von Emotionsarbeitern die Emotion als institutionalisiertes Hilfsmittel für den Unternehmenserfolg einzusetzen und in Form von "emotionaler Darbietung" in den Dienst ihrer Organisation zu stellen. Nach einer Darstellung der psychologisch-soziologischen Wurzeln und Wirkungsweisen der emotionalen Ansteckung, werden zentrale Zusammenhänge beleuchtet, in denen sie in Organisationen eine Rolle spielt und ihr

Empathy: A Quantum Approach - The Psychological Influence of Emotion Oct 22 2021 This textbook, written by bestselling author and metaphysicist Dr. Theresa M. Kelly, offers you straightforward, honest explanations of psychical empathy through new research initiatives in parapsychology, psychology, neuroscience, quantum mechanics, and related subjects for a semi-technical audience. Whether you are an intelligent layperson or professional curious about empathy, or looking to discover how to utilize empathy, this textbook will provide a detailed framework, without complicated equations, onto which more advanced concepts can be applied. For students of Empathic Studies, this textbook will be a revelation of what actions and influences you are involved in and exactly how you can take your empathic

ability to a completely new level step-by-step. (Includes: Models, Definitions, Descriptions, Techniques, and Therapeutic and Experimental Practical Applications.) A Textbook of the University of Alternative Studies.

Social Psychology, Third Edition Jul 07 2020 This definitive work--now extensively revised with virtually all new chapters--has introduced generations of researchers to the psychological processes that underlie social behavior. What sets the book apart is its unique focus on the basic principles that guide theory building and research. Since work in the field increasingly transcends such boundaries as biological versus cultural or cognitive versus motivational systems, the third edition has a new organizational framework. Leading scholars identify and explain the principles that govern intrapersonal, interpersonal, intragroup, and intergroup processes, in chapters that range over multiple levels of analysis. The book's concluding section illustrates how social psychology principles come into play in specific contexts, including politics, organizational life, the legal arena, sports, and negotiation. New to This Edition *Most of the book is entirely new. *Stronger emphasis on the contextual factors that influence how and why the basic principles work as they do. *Incorporates up-to-date findings and promising research programs. *Integrates key advances in such areas as evolutionary theory and neuroscience.

Music and Consciousness Dec 12 2020 What is consciousness? Why and when do we have it? Where does it come from, and how does it relate to the lump of squishy grey matter in our heads, or to our material and social worlds? While neuroscientists, philosophers, psychologists,

historians, and cultural theorists offer widely different perspectives on these fundamental questions concerning what it is like to be human, most agree that consciousness represents a 'hard problem'. The emergence of consciousness studies as a multidisciplinary discourse addressing these issues has often been associated with rapid advances in neuroscience—perhaps giving the impression that the arts and humanities have arrived late at the debating table. The longer historical view suggests otherwise, but it is probably true that music has been under-represented in accounts of consciousness. *Music and Consciousness* aims to redress the balance: its twenty essays offer a timely and multi-faceted contribution to consciousness studies, critically examining some of the existing debates and raising new questions. The collection makes it clear that to understand consciousness we need to do much more than just look at brains: studying music demonstrates that consciousness is as much to do with minds, bodies, culture, and history. Incorporating several chapters that move outside Western philosophical traditions, *Music and Consciousness* corrects any perception that the study of consciousness is a purely occidental preoccupation. And in addition to what it says about consciousness the volume also presents a distinctive and thought-provoking configuration of new writings about music.

Affect and Emotion Jan 13 2021 *Affect and Emotion* includes a variety of chapters by some of the most prominent scholars in the area of emotions and leadership, as well as chapters by rising stars. These chapters chart the direction of future research in affect and leadership in four main areas.

First, several of these chapters make a convincing argument that leaders use emotional labor and other forms of emotional displays to influence followers and team members. Leaders may use emotional labor to manage relational identities, or to create favorable impressions on followers and to create trust. Leaders' active emotional displays increase vision related performance and perception of transformational leadership. Second, one chapter reveals how emotions play an important role in leadership at every level, from within-person to organization-wide leadership. Leader's emotional labor plays an important role in several of these levels, with the exact method of performing emotional labor varying by level. A second chapter also examines levels of leadership, with a particular examination of the effects of leader emotional labor on close and distant leadership. Third, several of the chapters examine emotions from the authentic leadership and positive leadership perspectives, and two of these chapters focus on how psychological capital and authentic leadership skills help leaders be resilient and overcome obstacles. Fourth, two of the chapters show the role of affect and friendship ties to leadership research. One of these chapters examines the need to develop psychometrically sound measures of affect and friendship, whereas the other develops a model of how affect influences social network ties and informal leadership emergence. Taken together, these chapters illustrate four important research trends in emotions and leadership that are likely to grow in importance in the coming years.

Economic Bubbles: A Story of New Eras, Emotional Contagion and Structural Support Sep 20 2021 Economic

bubbles go hand in hand with financial inventions, financial liberalization and excess leverage. Frequently these bubbles are fueled by the overoptimistic outlook not only of the so-called experts or gurus but also by the extremely positive perception of the general public. Great hikes in asset and commodity markets are believed to be a result of the new economy that has been created. Historical levels of markets and where the level of fundamentals should really be are either unknown or completely ignored. Partially one could account this to the short financial memory of market participants. Partially the abstract nature of the markets and the complexity of financial products themselves may be the reason. This paper tries to identify regularities defining economic bubbles concentrating on the most recent ones. Different approaches in explaining market movements will be discussed. Further, not only structural but especially psychological factors which may cause the emergence, the inflation and the implosion of economic bubbles are considered. Already existing agent based models, policy responses and possible future policy measures are analyzed and evaluated.

Emotions Don't Think Aug 20 2021 People get emotional about what they believe, and so when their beliefs are criticized, challenged or even attacked, their emotions usually get riled up. This is natural. It is human nature. It happens to most of us. Feelings and emotions spread easily in society at these times. But we have to manage them for the betterment of all of us. Understanding how to manage them effectively helps lower the turmoil and destruction, since emotions drive actions. In the book Bruce talks about how

emotional contagion contributes to social and political turmoil and how people can work at overcoming emotional contagion to lower the turmoil. The impact of emotions and feelings during social -- political upheaval has been strong and he writes about how to manage them to lower their impact, in any future events, since they can get destructive. *Social and Cultural Lives of Immune Systems* Sep 08 2020 This book introduces a provocative new branch of social theory: the hypothesis that immunity and disease are in part socially constituted. It suggests that immune systems function not only as material entities but also as social symbols.

Advances in Practical Applications of Scalable Multi-agent Systems. The PAAMS Collection Aug 08 2020 This book constitutes the refereed proceedings of the 14th International Conference on Practical Applications of Scalable Multi-agent Systems, PAAMS 2016, held in Sevilla, Spain, in June 2016. The 9 revised full papers, 10 short papers, and 16 Demo papers were carefully reviewed and selected from 58 submissions (39 full paper and 19 Demo paper submissions). The papers report on the application and validation of agent-based models, methods, and technologies in a number of key application areas, including day life and real world, energy and networks, human and trust, markets and bids, models and tools, negotiation and conversation, scalability and resources.

Emotional Contagion Nov 03 2022 A study of the phenomenon of emotion contagion, or the communication of mood to others.

Intelligent Virtual Agents Apr 15 2021 This book constitutes

the refereed proceedings of the 11th International Conference on Intelligent Virtual Agents, IVA 2011, held in Reykjavik, Island, in September 2011. The 18 revised full papers and 27 revised short papers presented together with 25 poster papers were carefully reviewed and selected from 91 submissions. The papers are organized in topical sections on social and dramatic interaction; guides and relational agents; nonverbal behavior; adaptation and coordination; listening and feedback; frameworks and tools; cooperation and copresence; emotion; poster abstracts.

Living Mindfully Oct 29 2019 Written by a practitioner with over 25 years of experience, *Living Mindfully* shows how mindfulness can be integrated with coaching in order to enhance motivation and achieve an authentic life. Combines mindfulness techniques designed to explore an individual's relationships to thoughts, values and emotions with coaching strategies that build self-confidence and motivation Details the *Living Mindfully* program and the practical coaching intervention, *Training Individuals in Mindfulness and Excellence (TIME)*, with tips, exercises, further resources and client testimonials Discusses important aspects of mindfulness, including awareness, staying present, acceptance, authenticity, and dealing with negative beliefs and emotions Outlines the requirements for setting up and maintaining a mindfulness program for mindfulness teachers, coaches, counselors, policymakers, and government departments

Aesthetics and the Sciences of Mind Jan 01 2020 Through much of the twentieth century, philosophical thinking about works of art, design, and other aesthetic products has

emphasized intuitive and reflective methods, often tied to the idea that philosophy's business is primarily to analyze concepts. This 'philosophy from the armchair' approach contrasts with methods used by psychologists, sociologists, evolutionary thinkers, and others who study the making and reception of the arts empirically. How far should philosophers be sensitive to the results of these studies? Is their own largely a priori method basically flawed? Are their views on aesthetic value, interpretation, imagination, and the emotions of art to be rethought in the light of best science? The essays in this volume seek answers to these questions, many through detailed studies of problems traditionally regarded as philosophical but where empirical inquiry seems to be shedding interesting light. No common view is looked for or found in this volume: a number of authors argue that the current enthusiasm for scientific approaches to aesthetics is based on a misunderstanding of the philosophical enterprise and sometimes on misinterpretation of the science; others suggest various ways that philosophy can and should accommodate and sometimes yield to the empirical approach. The editors provide a substantial introduction which sets the scene historically and conceptually before summarizing the claims and arguments of the essays.

Advancing Relational Leadership Research Feb 23 2022
Leaders and followers live in a relational world—a world in which leadership occurs in complex webs of relationships and dynamically changing contexts. Despite this, our theories of leadership are grounded in assumptions of individuality and linear causality. If we are to advance understandings of leadership that have more relevance to the world of practice,

we need to embed issues of relationality into leadership studies. This volume addresses this issue by bringing together, for the first time, a set of prominent scholars from different paradigmatic and disciplinary perspectives to engage in dialogue regarding how to meet the challenges of relationality in leadership research and practice. Included are cutting edge thinking, heated debate, and passionate perspectives on the issues at hand. The chapters reveal the varied and nuanced treatments of relationality that come from authors' alternative paradigmatic (entity, constructionist, critical) views. Dialogue scholars—reacting to the chapters—engage in spirited debate regarding the commensurability (or incommensurability) of the paradigmatic approaches. The editors bring the dialogue together with introductory and concluding chapters that offer a framework for comparing and situating the competing assumptions and perspectives spanning the relational leadership landscape. Using paradigm interplay they unpack assumptions, and lay out a roadmap for relational leadership research. A key takeaway is that advancing relational leadership research requires multiple paradigmatic perspectives, and scholars who are conversant in the assumptions brought by these perspectives. The book is aimed at those who feel that much of current leadership thinking is missing the boat in today's complex, relational world. It provides an essential resource for all leadership scholars and practitioners curious about the nature of research on leadership, both those with much research exposure and those new to the field.

Emotion and Social Structures Dec 24 2021 The past decades have seen significant advances in the sociological understanding of human emotion. Sociology has shown how culture and society shape our emotions and how emotions contribute to micro- and macro-social processes. At the same time, the behavioral sciences have made progress in understanding emotion at the level of the individual mind and body. *Emotion and Social Structures* embraces both perspectives to uncover the fundamental role of affect and emotion in the emergence and reproduction of social order. How do culture and social structure influence the cognitive and bodily basis of emotion? How do large-scale patterns of feeling emerge? And how do emotions promote the coordination of social action and interaction? Integrating theories and evidence from disciplines such as psychology, cognitive science, and neuroscience, Christian von Scheve argues for a sociological understanding of emotion as a bi-directional mediator between social action and social structure. This book will be of interest to students and scholars of the sociology of emotion, microsociology, and cognitive sociology, as well as social psychology, cognitive science, and affective neuroscience.

Cognitive Systems Engineering Nov 30 2019 This book provides a framework for integrating complex systems that are problem-centric, human-centered, and provides an interdisciplinary, multi-methodological purview of multiple perspectives surrounding the human factors/human actors within living ecosystems. This book will provide useful theoretical and practical information to human factors,

human-computer interaction, cognitive systems engineering personnel who are currently engaged in human-centered design or other applied aspects of modeling, simulation, and design that requires joint understanding of theory and practice.

Empathy and Morality Jan 31 2020 Empathy's centrality to morality is heavily debated. Many religious and philosophical traditions have favoured empathy, sympathy, or compassion as key to moral thought, conduct, or motivation. This collection brings together original papers in philosophy, psychology, psychiatry, anthropology, and neuroscience to give a comprehensive overview of the issue, and includes an extensive survey of empathy and empathy-related emotions. It is distinctive in focusing on the moral import of empathy and sympathy.

Sentimental Rules Mar 27 2022 Sentimental Rules is an ambitious and highly interdisciplinary work, which proposes and defends a new theory about the nature and evolution of moral judgment. In it, philosopher Shaun Nichols develops the theory that emotions play a critical role in both the psychological and the cultural underpinnings of basic moral judgment. Nichols argues that our norms prohibiting the harming of others are fundamentally associated with our emotional responses to those harms, and that such 'sentimental rules' enjoy an advantage in cultural evolution, which partly explains the success of certain moral norms. This has sweeping and exciting implications for philosophical ethics. Nichols builds on an explosion of recent intriguing experimental work in psychology on our capacity for moral judgment and shows how this empirical work has

broad import for enduring philosophical problems. The result is an account that illuminates fundamental questions about the character of moral emotions and the role of sentiment and reason in how we make our moral judgments. This work should appeal widely across philosophy and the other disciplines that comprise cognitive science.

Blackwell Handbook of Social Psychology Feb 11 2021 This handbook provides an authoritative, up-to-date overview of the social psychology of group processes. The topics covered include group decisions, juries, group remembering, roles, status, leadership, social identity and group membership, socialization, group performance, negotiation and bargaining, emotion and mood, computer-mediated communication, organizations and mental health. Provides an authoritative, up-to-date overview of the social psychology of group processes. Written by leading researchers from around the world to provide a classic and current overview of research as well as providing a description of future trends within the area. Includes coverage of group decisions, juries, group remembering, roles, status, leadership, social identity and group membership, socialization, group performance, negotiation and bargaining, emotion and mood, computer-mediated communication, organizations and mental health. Essential reading for any serious scholar of group behavior. Now available in full text online via xreferplus, the award-winning reference library on the web from xrefer. Mixed Emotions Nov 10 2020 In recent years, it's become increasingly clear that emotion plays a central role in global politics. For example, people readily care about acts of

terrorism and humanitarian crises because they appeal to our compassion for human suffering. These struggles also command attention where social interactions have the power to produce or intensify the emotional responses of those who participate in them. From passionate protests to poignant speeches, Andrew A. G. Ross analyzes high-emotion events with an eye to how they shape public sentiment and finds that there is no single answer. The politically powerful play to the public's emotions to advance their political aims, and such appeals to emotion also often serve to sustain existing values and institutions. But the affective dimension can produce profound change, particularly when a struggle in the present can be shown to line up with emotionally resonant events from the past. Extending his findings to well-studied conflicts, including the War on Terror and the violence in Rwanda and the Balkans, Ross identifies important sites of emotional impact missed by earlier research focused on identities and interests.

Neuroeconomics Mar 03 2020 In the years since it first published, *Neuroeconomics: Decision Making and the Brain* has become the standard reference and textbook in the burgeoning field of neuroeconomics. The second edition, a nearly complete revision of this landmark book, will set a new standard. This new edition features five sections designed to serve as both classroom-friendly introductions to each of the major subareas in neuroeconomics, and as advanced synopses of all that has been accomplished in the last two decades in this rapidly expanding academic discipline. The first of these sections provides useful introductions to the disciplines of microeconomics, the

psychology of judgment and decision, computational neuroscience, and anthropology for scholars and students seeking interdisciplinary breadth. The second section provides an overview of how human and animal preferences are represented in the mammalian nervous systems. Chapters on risk, time preferences, social preferences, emotion, pharmacology, and common neural currencies—each written by leading experts—lay out the foundations of neuroeconomic thought. The third section contains both overview and in-depth chapters on the fundamentals of reinforcement learning, value learning, and value representation. The fourth section, “The Neural Mechanisms for Choice, integrates what is known about the decision-making architecture into state-of-the-art models of how we make choices. The final section embeds these mechanisms in a larger social context, showing how these mechanisms function during social decision-making in both humans and animals. The book provides a historically rich exposition in each of its chapters and emphasizes both the accomplishments and the controversies in the field. A clear explanatory style and a single expository voice characterize all chapters, making core issues in economics, psychology, and neuroscience accessible to scholars from all disciplines. The volume is essential reading for anyone interested in neuroeconomics in particular or decision making in general. Editors and contributing authors are among the acknowledged experts and founders in the field, making this the authoritative reference for neuroeconomics Suitable as an advanced undergraduate or graduate textbook as well as a thorough reference for active researchers

Introductory

chapters on economics, psychology, neuroscience, and anthropology provide students and scholars from any discipline with the keys to understanding this interdisciplinary field Detailed chapters on subjects that include reinforcement learning, risk, inter-temporal choice, drift-diffusion models, game theory, and prospect theory make this an invaluable reference Published in association with the Society for

Neuroeconomics—www.neuroeconomics.org Full-color presentation throughout with numerous carefully selected illustrations to highlight key concepts

The Burnout Companion To Study And Practice Apr 27 2022 Burnout is a common metaphor for a state of extreme psychophysical exhaustion, usually work-related. This book provides an overview of the burnout syndrome from its earliest recorded occurrences to current empirical studies. It reviews perceptions that burnout is particularly prevalent among certain professional groups - police officers, social workers, teachers, financial traders - and introduces individual inter- personal, workload, occupational, organizational, social and cultural factors. Burnout deals with occurrence, measurement, assessment as well as intervention and treatment programmes.; This textbook should prove useful to occupational and organizational health and safety researchers and practitioners around the world. It should also be a valuable resource for human resources professional and related management professionals.

Human Interaction and Emotional Awareness in Gestalt Therapy Nov 22 2021 In Human Interaction and Emotional Awareness in Gestalt Therapy H. Peter Dreitzel explores a

model of the contacting processes between human beings and their environments and presents a phenomenological exploration of the emotions guiding such contacts. The book makes an important contribution to our understanding of the role of psychotherapy in the modern world, especially in the context of change and crisis. Dreitzel sets out a new perspective of how we interact with each other, how we frame our encounters and differentiate them from one another, how we give them meaning, and how they are related to our needs and wants. This is followed by a unique phenomenological exploration of the emotions guiding such contacts, the first time the world of human feelings has been explored in depth and systematically analysed in Gestalt thought. These innovative explorations are framed first by a discussion of the historical development of Western conventions regarding everyday behaviour, and secondly by an examination of perspectives on climate change. Dreitzel analyses the mental and emotional states of potential clients as they are affected by these global processes and the book also includes an epilogue which evaluates how to work with climate anxiety. Dreitzel's conception of social change, with Gestalt therapy at its core, is relevant to all aspects of humanistic psychology. It elevates empathy, emotional development and the prevention of suffering at all levels of society, filling important gaps in Gestalt therapy theory and expanding it into exciting new territory. Human Interaction and Emotional Awareness in Gestalt Therapy also contains an insightful foreword by Michael Vincent Miller, PhD, and will be essential reading for Gestalt therapists, other professionals with an interest in Gestalt approaches and

readers interested in social interaction, climate change and the role of psychotherapy in a changing world.

Affect in Social Thinking and Behavior Mar 15 2021 The role of affect in how people think and behave in social situations has been a source of fascination to laymen and philosophers since time immemorial. Surprisingly, most of what we know about the role of feelings in social thinking and behavior has been discovered only during the last two decades. *Affect in Social Thinking and Behavior* reviews and integrates the most recent research and theories on this exciting topic, and features original contributions reviewing key areas of affect research from leading researchers active in the area. The book covers fundamental issues, such as the nature and relationship between affect and cognition, as well as chapters that deal with the cognitive antecedents of emotion, and the consequences of affect for social cognition and behavior. This volume offers a highly integrated and comprehensive coverage of this field, and is suitable as a core textbook in advanced courses dealing with the role of affect in social cognition and behavior.

Expression of emotion in music and vocal communication May 05 2020 Two of the most important social skills in humans are the ability to determine the moods of those around us, and to use this to guide our behavior. To accomplish this, we make use of numerous cues. Among the most important are vocal cues from both speech and non-speech sounds. Music is also a reliable method for communicating emotion. It is often present in social situations and can serve to unify a group's mood for ceremonial purposes (funerals, weddings) or general social

interactions. Scientists and philosophers have speculated on the origins of music and language, and the possible common bases of emotional expression through music, speech and other vocalizations. They have found increasing evidence of commonalities among them. However, the domains in which researchers investigate these topics do not always overlap or share a common language, so communication between disciplines has been limited. The aim of this Research Topic is to bring together research across multiple disciplines related to the production and perception of emotional cues in music, speech, and non-verbal vocalizations. This includes natural sounds produced by human and non-human primates as well as synthesized sounds. Research methodology includes survey, behavioral, and neuroimaging techniques investigating adults as well as developmental populations, including those with atypical development. Studies using laboratory tasks as well as studies in more naturalistic settings are included.

Healing the Reason-Emotion Split Aug 27 2019 *Healing the Reason-Emotion Split* draws on research from experimental psychology and neuroscience to dispel the myth that reason should be heralded above emotion. Arguing that reason and emotion mutually benefit our decision-making abilities, the book explores the idea that understanding this relationship could have long-term advantages for our management of society's biggest problems. Levine reviews how reason and emotion operated in historical movements such as the Enlightenment, Romanticism and 1960s' counterculture, to conclude that a successful society would restore human connection and foster compassion in economics and politics

by equally utilizing reason and emotion. Integrating discussion on classic and contemporary neurological studies and using allegory, the book lays out the potential for societal change through compassion, and would be of interest to psychologists concerned with social implications of their fields, philosophy students, social activists, and religious leaders.

The SAGE Handbook of Nonverbal Communication Sep 28 2019 This Handbook provides an up-to-date discussion of the central issues in nonverbal communication and examines the research that informs these issues. Editors Valerie Manusov and Miles Patterson bring together preeminent scholars, from a range of disciplines, to reveal the strength of nonverbal behavior as an integral part of communication.

The Art of Experience Jun 17 2021 The Art of Experience provides an interdisciplinary analysis of selected plays from Ireland's premier female playwright, Marina Carr. Dagmara Giz'ø explores the transformative impact of a theatrical experience in which interdisciplinary boundaries must be crossed. This book demonstrates that theatre is therapeutic and therapy is theatrical. The role of emotions, cognitions, and empathy in the theatrical experience is investigated throughout. Dagmara Giz'ø utilises the methodological tools stemming from modern empirically grounded psychology (such as cognitive-behavioural therapy or CBT) to the study of theatre's transformative potential. This book will be of great interest to students and scholars of theatre, performance, and literature, and will be a fascinating read for those at the intersection of cognitive studies and the humanities.

Advanced Approaches to Intelligent Information and Database Systems

Jul 19 2021 This book consists of 35 chapters presenting different theoretical and practical aspects of Intelligent Information and Database Systems. Nowadays both Intelligent and Database Systems are applied in most of the areas of human activities which necessitates further research in these areas. In this book various interesting issues related to the intelligent information models and methods as well as their advanced applications, database systems applications, data models and their analysis and digital multimedia methods and applications are presented and discussed both from the practical and theoretical points of view. The book is organized in four parts devoted to intelligent systems models and methods, intelligent systems advanced applications, database systems methods and applications and multimedia systems methods and applications. The book will be interesting for practitioners and researchers, especially graduate and PhD students of information technology and computer science, as well more experienced academics and specialists interested in developing and verification of intelligent information, database and multimedia systems models, methods and applications. The readers of this volume are enabled to find many inspiring ideas and motivating practical examples that will help them in the current and future work.

Atmospheric Turn in Culture and Tourism

Jul 31 2022 Combining ideas of sustainable development, strategic marketing and branding with space design and architecture, this volume offers contemporary perspectives on the development and impact of 'atmospheric quality' in tourism

and hospitality service situations. Topics discussed include: silent airports, ambient odours and, co-created atmospheres.

Fairness and Groups Oct 10 2020 Concerns about justice and fairness are ubiquitous within and between communities, social groups, organizations and states. This title introduces justice theorizing and research at the intersection of justice and groups. It is of interest to students and scholars in psychology, sociology, law and organizational behavior.

Organizational Behavior: Science, The Real World, and You

Apr 03 2020 Help your students learn not only the concepts and theories that enhance the management of human behavior at work but also how to practice these skills with Nelson/Quick's ORGANIZATIONAL BEHAVIOR. The latest edition of this book clearly demonstrates how organizational behavior theories and research apply to companies today with engaging cases, meaningful exercises, and examples that include six new focus companies students will instantly recognize. The authors present foundational organizational behavior topics, such as motivation, leadership, teamwork, and communication. Students also examine emerging issues reshaping the field today, such as the theme of change. They study how change affects attitudes and behaviors in an organization as well as what new opportunities and experiences change presents. Students further explore growing themes of globalization, diversity, and ethics. The authors anchor the book's multifaceted approach in both classic research and leading-edge scholarship. Timely examples from all types of organizations throughout this edition reflect today's most current trends, including six new focus companies--NetFlix, Ford, Groupon,

and more. Self-assessments and other interactive learning opportunities allow your students to grow and develop, both as individuals and as important contributors to an organization, as they progress throughout your course. Emotion and Performance Jan 25 2022 In this special issue, five papers address the study of emotions from a variety of viewpoints. Two are theoretical essays that deal respectively with emotion and creativity and the relationships between individual and team performance. Three are empirical studies that canvas the emotion-performance nexus across levels of analysis: within-person, between-person, and in groups. Between them, the five papers present a strong case for the nexus of emotions and performance, but more importantly provide a platform for potentially fruitful future research in this burgeoning area.

Introduction to Social Neuroscience Jul 27 2019 A textbook that lays down the foundational principles for understanding social neuroscience Humans, like many other animals, are a highly social species. But how do our biological systems implement social behaviors, and how do these processes shape the brain and biology? Spanning multiple disciplines, *Introduction to Social Neuroscience* seeks to engage students and scholars alike in exploring the effects of the brain's perceived connections with others. This wide-ranging textbook provides a quintessential foundation for comprehending the psychological, neural, hormonal, cellular, and genomic mechanisms underlying such varied social

processes as loneliness, empathy, theory-of-mind, trust, and cooperation. Stephanie and John Cacioppo posit that our brain is our main social organ. They show how the same objective relationship can be perceived as friendly or threatening depending on the mental states of the individuals involved in that relationship. They present exercises and evidence-based findings readers can put into practice to better understand the neural roots of the social brain and the cognitive and health implications of a dysfunctional social brain. This textbook's distinctive features include the integration of human and animal studies, clinical cases from medicine, multilevel analyses of topics from genes to societies, and a variety of methodologies. Unveiling new facets to the study of the social brain's anatomy and function, *Introduction to Social Neuroscience* widens the scientific lens on human interaction in society. The first textbook on social neuroscience intended for advanced undergraduates and graduate students. Chapters address the psychological, neural, hormonal, cellular, and genomic mechanisms underlying the brain's perceived connections with others. Materials integrate human and animal studies, clinical cases, multilevel analyses, and multiple disciplines.
