*Firms' Objectives and Internal Organisation in a Global Economy* Apr 27 2022 The interplay between firms' internal organization and market behaviour is a long standing issue in industrial economics. This book examines firms' objectives in the comparatively new perspective shaped by globalization. The positive and normative aspects of theoretical analysis are developed and richly complemented by empirical studies.

**China's objectives with the Belt and Road Initiative** Nov 30 2019 Essay from the year 2020 in the subject Politics - International Politics - Topic: Globalization, Political Economics, grade: 1,0, Dresden Technical University, language: English, abstract: What are the objectives behind China's promotion and development of the

Belt and Road Initiative? Answering this question is the main purpose of this essay which is based on an international political economy (IPE) approach to bridge geoeconomic and geopolitical perspectives. The ancient Silk Road served as vast trade network between China, other Asian countries, Europe and the Middle East for more than 2,000 years. By launching the Belt and Road Initiative (BRI) - comprising the Silk Road Economic Belt, the 21st Century Maritime Silk Road and a Digital Silk Road - China has revived this concept in 2013. While some scholars and politicians welcome the BRI as China's contribution to international public goods and international development, others reject it claiming that its objectives are not transparent or, that it is a tool for China to leverage its massive economic resources for geostrategic interests and to facilitate business for its state-owned enterprises. Thus, is the BRI's main objective to undermine the US-led world order? Is it driven by altruism aimed on facilitating economic growth in less developed countries? Is it the Chinese way to deal with domestic economy challenges? Or is it just an empty slogan?

**The World Economic Forum** Nov 10 2020 This book explores the paradoxes and

unique characteristics of the World Economic Forum, highlighting contemporary issues and debates on global governance, economic development and corporate social responsibility. The Forum is one of the most influential, but least understood, global institutions. Its annual meeting in Davos, Switzerland and its regional summits held around the world attract a significant and powerful audience from the worlds of business, economics, politics and civil society. The participants, who include business and political leaders, representatives of international institutions and civil society organizations, academia and the media, meet to debate issues of global concern and to develop possible solutions. Forum members see the organization as an innovative venue bringing together different types of stakeholders to solve global problems. To its critics, however, the Forum's public face conceals a private venue for making business deals. With clear and concise sections, including boxes containing key ideas and arguments, The World Economic Forum is a much needed introduction to an important and controversial organization and will be of considerable interest to students and practitioners of international business, international political economy, economics, development, international relations, and globalization.

*A Systems Perspective on Financial Systems* Sep 28 2019 This book is devoted to a systems-theoretical presentation of the main results of applying the systemic yoyo model and relevant analytical tools to the topics of money and financial institutions. The author presents the main concepts and results of the subject matter in the language of systems science, which has in the past century prompted revolutionary applications of systems research in various subfields of traditional disciplines. This volume applies a brand new logic of reasoning to some of the unsettled problems in the area of money and banking. Due to the particular systemic approach employed, the reader will be able to see how different economic activities are implicitly related to each other and how financial decisions are holistically made in reference to seemingly unrelated events. That is, the learning of this particular subject matter takes place at a different, more elevated level, from which, among others, economies are respectively seen as both closed and open systems; their interactions emulate those of rotational pools of fluids. This book can be used as a textbook for researchers and graduate students in economics, finance, systems science, and mathematical / systems modeling. It will also be useful as a reference book for applied economists and various policy makers.

*Economics After the Crisis* Apr 15 2021 A noted economist challenges the

fundamental economic assumptions that cast economic growth as the objective and markets as the universally applicable means of achieving it. The global economic crisis of 2008–2009 seemed a crisis not just of economic performance but also of the system's underlying political ideology and economic theory. But a second Great Depression was averted, and the radical shift to New Deal-like economic policies predicted by some never took place. Perhaps the correct response to the crisis is simply careful management of the macroeconomic challenges as we recover, combined with reform of financial regulation to prevent a recurrence. In *Economics After the Crisis*, Adair Turner offers a strong counterargument to this somewhat complacent view. The crisis of 2008–2009, he writes, should prompt a wide set of challenges to economic and political assumptions and to economic theory. Turner argues that more rapid growth should not be the overriding objective for rich developed countries, that inequality should concern us, that the pre-crisis confidence in financial markets as the means of pursuing objectives was profoundly misplaced.

**The Objectives of the New International Economic Order** Jun 29 2022 The Objectives of the New International Economic Order focuses on the role of the New International Economic Order (NIEO) in the resolution of issues in world economy, international trade, economic policies, trade relations, and business practices. The manuscript first offers information on the objectives of the NIEO in historical and global perspectives, as well as the political relevance of the NIEO, historical factors in the emergence of the NIEO, and contrary perceptions and vicious circles. The book also takes a look at the objectives of the NIEO regarding issues in world economy. Concerns include renegotiating the debts of developing countries, attaining United Nations development assistance targets, and using funds from disarmament for development. The publication discusses international trade and world economy issues. Topics include adjusting the economic policies of developed countries to facilitate the expansion and diversification of the exports of developing countries; improving and intensifying trade relations between countries having

different social and economic systems; and increasing the transfer of resources through the World Bank and the International Monetary Fund. The text also elaborates on industrialization issues, technology transfer, and business practices and social issues. The book is a vital source of information for readers interested in the role of NIEO in the resolution of issues in world economy, international trade, economic policies, trade relations, and business practices.

*Consumer Credit and the American Economy* Jan 31 2020 This article provides an introduction to a law review symposium by the Journal of Law, Economics, and Policy on our book (co-authored with Michael E. Staten), *Consumer Credit and the American Economy* (Oxford 2014). The conference, held November 2014, collects several articles responding to and building on the research agenda laid out by our book. For those who have not read the book, this article is intended to summarize several of the main themes of the book, including discussion of economic models of consumer credit usage, trends in consumer credit usage over time, the use of high-cost credit, and behavioral economics.

Objectives of Monetary Policy Oct 29 2019 Essay from the year 2007 in the subject Business economics - Economic Policy, grade: 4,0 (gut), University of Pécs (Faculty of Business and Economics), course: Corporate Finance, 26 entries in the bibliography, language: English, abstract: Two fields of policy have a strong impact

on a national economy and its development. The first of the two policies that are designed to supplement each other, falls into governments responsibility, more exactly it is formulated by the minister of finance. This one is fiscal policy. The second one, monetary policy, is designed by the national bank. For making clear the difference between both I would like to explain both policies as an introduction to the topic of this paper. "The government's choice of tax and spending programs, which influences the amount and maturity of government debt as well as the level, composition, and distribution of national output and income. Many summary indicators of fiscal policy exist. Some, such as the budget surplus or deficit, are narrowly budgetary. Others attempt to reflect aspects of how fiscal policy affects the economy. For example, a decrease in the standardized-budget surplus (or increase in the standardized-budget deficit) measures the short-term stimulus of demand that results from higher spending or lower taxes. The fiscal gap measures whether current fiscal policy implies a budget that is close enough to balance to be sustainable over the long term. The fiscal gap represents the amount by which taxes would have to be raised, or spending cut, to keep the ratio of debt to GDP from rising forever. Other important measures of fiscal policy include the ratios of total taxes and total spending to GDP." In the way of deciding about the amount of expenditures and premises for spending, fiscal policy is an important tool for

government for setting macroeconomic conditions.
