Towards a new order in the global automotive industry: How Asian companies catch up to their western peers Jul 27 2019 The global automotive industry faces the most influential changes since the revolutionary introduction of mass production a century ago. Latecomer firms from Asia are challenging the western incumbents. They can change the rules of the game in the industry by leapfrogging several steps in their development process. This study seeks to contribute to the discussion of latecomer firms by gaining insights into the catch up processes of five automotive companies in the passenger car segment, namely BYD (PRC), Chery (PRC), Geely (PRC), Tata Motors (India) and Mahindra & Mahindra (India). Based on learning theories and the core processes of car manufacturers, the author develops a catch up framework in order to compare automotive latecomers. The Korean manufacturer Hyundai serves as an example for a successful catch up, and provides a contextual framing for catch up processes in the automotive sector. An analysis of empirical data provides evidence for the evaluation of the catch up status of the five challenger firms. The author emphasizes the influence of institutional settings in China and India and the role of business groups that can act as facilitators for the catch up process. Finally, the study clusters the catch up strategies of the five observed companies in order to compare their approach.

Crushed! Jan 13 2021 CRUSH-ED is not another whining story about the African experience, even though the titled may lead in that direction. The title is really an acronym for the strategies that Africa (the sub-Saharan region in particular), must adopt if it is not to face extinction in the medium to long term. The book presents pungent, and urgent, analysis of the precarious situation that that region of Africa has found itself; a situation foisted not only by the historical facts of slaver trade and colonialism (as most texts on the subject are wont to aver), but most importantly the failure of the African states themselves to properly interpret their cultures and how those clash with the ones they are trying to adopt and adapt to. CRUSH-ED navigates the tortuous terrain, delivering enough kicks in the belly to all stakeholders; chiefly the Africans themselves, the colonisers, the dominant cultures, the superpowers, the politicians, and not least, the author himself! This book should refresh every reader, especially those that are ready to be objective and face some 'inconvenient truths', about the world... about themselves.

On Home Soil Sep 28 2019 When the deadly and elusive Ahmed ibn Facquard bombs the World Peace Summit at the Sandton Hilton Hotels Complex in Johannesburg, South Africa, the world cries for blood. Led by a reeling United States, calls are made for decisive action to be taken apprehending the terrorist who for all appearances is being protected by his home country. In a chilling race against time, two unlikely agents are brought in by their respective countries to track down and eliminate the threat "by any means necessary." The hunt begins in the ruins of the demolished building and in the backstreets of a lowly oil-drilling settlement in Nigeria, and culminates in a high-stakes, no-holds-barred showdown in a mansion On Home Soil in one of Nigeria's bustling conurbations in which the two agents are pitted against each other and against a terrorist whose origins conceal a deadly secret.

Lemon-Aid Used Cars and Trucks 2012-2013 May 29 2022 Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. U.S. automakers are suddenly awash in profits, and South Koreans and Europeans have gained market shares, while Honda, Nissan, and Toyota have curtailed production following the 2011 tsunami in Japan. Shortages of Japanese new cars and supplier disruptions will likely push used car prices through the roof well into 2012, so what should a savvy buyer do? The all-new Lemon-Aid Used Cars and Trucks 2012-2013 has the answers, including: More vehicles rated, with some redesigned models that don't perform as well as previous iterations downrated. More roof crash-

worthiness ratings along with an expanded cross-border shopping guide. A revised summary of safety- and performance-related defects that are likely to affect rated models. More helpful websites listed in the appendix as well as an updated list of the best and worst "beaters" on the market. More "secret" warranties taken from automaker internal service bulletins and memos than ever.

Follow the Crypto May 05 2020 After an earthquake rocks Bellingham, Washington, a building partially collapses and emergency personnel find what appears to be a money-laundering and illegal drug operation. Secret Service Special Agent Lucas Bitterman is called from San Francisco to investigate the discovery. Over the course of a week, Luke and DEA Special Agent Sara Donovan learn that the scheme is much bigger than they had thought. In fact, they have uncovered a major drug-trafficking operation spanning the West Coast, and the entire criminal enterprise is fueled with elaborate cryptocurrency transactions. But as Luke learns more about the case and the people involved, he is bothered by several seeming inconsistencies and voids in the evidence collected. His efforts to resolve the case lead to a startling conclusion and serious questions about law enforcement's ability to deal with cryptocurrency crimes and lingering reservations about the tension between enforcement of laws and administering justice.

Assessment of Fuel Economy Technologies for Light-Duty Vehicles Jul 19 2021 Various combinations of commercially available technologies could greatly reduce fuel consumption in passenger cars, sport-utility vehicles, minivans, and other light-duty vehicles without compromising vehicle performance or safety. Assessment of Technologies for Improving Light Duty Vehicle Fuel Economy estimates the potential fuel savings and costs to consumers of available technology combinations for three types of engines: spark-ignition gasoline, compression-ignition diesel, and hybrid. According to its estimates, adopting the full combination of improved technologies in medium and large cars and pickup trucks with spark-ignition engines could reduce fuel consumption by 29 percent at an additional cost of \$2,200 to the consumer. Replacing spark-ignition engines with diesel engines and components would yield fuel savings of about 37 percent at an added cost of approximately \$5,900 per vehicle, and replacing spark-ignition engines with hybrid engines and components would reduce fuel consumption by 43 percent at an increase of \$6,000 per vehicle. The book focuses on fuel consumption-the amount of fuel consumed in a given driving distance-because energy savings are directly related to the amount of fuel used. In contrast, fuel economy measures how far a vehicle will travel with a gallon of fuel. Because fuel consumption data indicate money saved on fuel purchases and reductions in carbon dioxide emissions, the book finds that vehicle stickers should provide consumers with fuel consumption data in addition to fuel economy information.

Automotive Aerodynamics Jul 07 2020 The automobile is an icon of modern technology because it includes most aspects of modern engineering, and it offers an exciting approach to engineering education. Of course there are many existing books on introductory fluid/aero dynamics but the majority of these are too long, focussed on aerospace and don't adequately cover the basics. Therefore, there is room and a need for a concise, introductory textbook in this area. Automotive Aerodynamics fulfils this need and is an introductory textbook intended as a first course in the complex field of aero/fluid mechanics for engineering students. It introduces basic concepts and fluid properties, and covers fluid dynamic equations. Examples of automotive aerodynamics are included and the principles of computational fluid dynamics are introduced. This text also includes topics such as aeroacoustics and heat transfer which are important to engineering students and are closely related to the main topic of aero/fluid mechanics. This textbook contains complex mathematics, which not only serve as the foundation for future studies but also provide a road map for the present text. As the chapters evolve, focus is placed on more applicable examples, which can be solved in class using elementary algebra. The approach taken is designed to make the mathematics more approachable and easier to understand. Key features: Concise textbook which provides an introduction to fluid mechanics and aerodynamics, with automotive applications Written by a leading author in the field who has experience working with motor sports teams in industry Explains basic concepts and equations before progressing to cover more advanced topics Covers internal and external flows for automotive applications Covers emerging areas of aeroacoustics and heat transfer Automotive Aerodynamics is a must-have textbook for undergraduate and graduate students in automotive and mechanical engineering, and is also a concise reference for engineers in industry.

Proceedings of the First International Conference on Intelligent Human Computer Interaction Aug 27 2019 Dear Reader! Welcome to the proceedings of the First International Conference on Intelligent Human Computer Interaction (IHCI 2009) organized by the Indian Institute of Information Technology Allahabad. This is the first International Conference focused on Human Computer Interaction being organized in India. There is an increased interest in the human factors issues of computer use with a number of systems. The conference aims to provide an excellent opportunity for the dissemination of interesting new research, discussion about them and the generation of new ideas in these areas. We planned to organize the conference around the following five tracks: Signal and Vision Processing Language Processing Cognitive modeling Sensors and Embedded systems for HCI Graphics, Animation and Gaming Graphics, Animation and Gaming, Signal and Vision Processing, Language Processing and Cognitive modeling attracted due attention in the conference program. Very few papers were submitted in Sensors and Embedded systems and Graphics and Animation. Language is the primary means of communication between humans though usually neglected from HCI perspective. It will be better if human-computer interaction can be done in the same model as human-human communication. This was the main motivation behind including Language Processing as a separate track in the conference. However, some of the papers could not really achieve the application aspect from the HCI perspective. We will improve on this point in the next conference.

The Race for Capital Feb 11 2021 *The Race for Capital (And Other Out-of-the-Box Economic Arguments) is my third book and an aggregation of some of my most important economic and financial thoughts in recent times, as distilled from my weekly column and elsewhere. The book's title derives from the biggest economic argument of the day: the problem of inequality which has finally been noticed by important economists around the world but to which no solution has yet been found. In this book, that argument is further advanced, and an African perspective is added, because whenever important economic arguments such as this goes on, that most vulnerable continent does not feature in the analysis. But the perspective of this book is not all about complaining about the state of Africa and its position development-wise but also on solutions. Some germane solutions are hereby offered for African economies especially, but these are also for every other economy around the world that seeks to reposition its people and make a dent in the hard-to-solve quagmires facing the world today. There are no simple solutions, apparently.*
