Transport of Nutrients in Plants Feb 23 2022 Transport of Nutrients in Plants provides the study of nutrient movement in plants. The greater part of this book deals with the physiology and cytology of phloem. The first chapter of the text deals with studies on the definition of the cellular pathways of transport. Chapter 2 considers how the mobility of solutes can be measured and the range of chemical species which are moved in xylem and phloem. The next chapter discusses the concepts of velocity and rate. The rest of the book is devoted to the characteristics of phloem transport and the ultrastructure of sieve elements, including such topics as the control of movement, solute-loading and -unloading mechanisms, the dependence of transport upon metabolic energy, bidirectional movement and water movement in phloem. Finally an account is given of the movement of endogenous growth regulators and a brief assessment of 'hormone-directed' transport. Botanists will find the book very interesting and informative.

Exploring Native American Cultures Through Crafts Sep 28 2019 From Cherokee marble games to Penobscot triangle toys, these fun, easy crafts and activities introduce readers to the fascinating, diverse cultures of the Native American peoples.

Collage Workshop for Kids Oct 02 2022 Be inspired and delighted by Collage Workshop for Kids, a colorful art instruction book on collage techniques for children—made in cooperation with The Eric Carle Museum of Picture Book Art. Collage Workshop for Kids pairs essays by educators from The Eric Carle Museum of Picture Book Art with instructions on collage technique. Chapters explore favorite art themes for kids and demonstrate how to work with colored tissue paper, newspaper, fabric and buttons, painted paper, torn paper, and more. In each chapter, Reggio-inspired author and teacher Shannon Merenstein explores each technique with original ideas. Members of the museum's education staff offer expert advice on creating art with children. Everything you need to know about collage is in this book, making it a great reference for teachers, librarians, and parents.

Islands of Inquiry Dec 24 2021 "Many of the papers in this volume present new and innovative research into the processes of maritime colonisation, processes that affect archaeological contexts from islands to continents. Others shift focus from process to the archaeology of maritime places from the Bering to the Torres Straits, providing highly detailed discussions of how living by and with the sea is woven into all elements of human life from subsistence to trade and to ritual. Of equal importance are more abstract discussions of islands as natural places refashioned by human occupation, either through the introduction of new organisms or new systems of production and consumption. These transformation stories gain further texture (and variety) through close examinations of some of the more significant consequences of colonisation and migration, particularly the creation of new cultural identities. A final set of papers explores the ways in which the techniques of archaeological sciences have provided insights into the fauna of the islands and the human history of such places."--Provided by publisher.

Science Activities: The Leaves Are Falling in Rainbows Sep 01 2022 The excitement and discovery of science exploration is introduced to young children with these thought-provoking activities. Successfully child-tested, these hands-on experiences help your children learn about science the way children learn best! Knowledge is gained, and retained, as children play with water, air, plants, magnets, and more. Activities extend from independent exploration to, classroom projects. An excellent resource for the science learning center.

Materials Encyclopedia for Creatives Jan 01 2020 Materials and the myriad technologies that have been developed to manipulate them are of essential relevance to product designers, architects, artists and stylists, as they represent the starting point for every product and every architectural work. The book is an encyclopaedic compendium of around 1,000 terms in this field, from aerogel to marble to zirconium. It features traditional and frequently used materials, as well as new and unexpected ones. Their respective advantages and disadvantages are precisely described. In addition, terms related to production processes, such as upcycling or tanning, or that describe the properties of materials or are closely related to the topic have also been included.

Papermaking May 29 2022 The classic work on papermaking, this book traces the craft's history from its invention in China to its introductions in Europe and America. The foremost authority on the subject covers tools and materials; hand moulds; pressing, drying, and sizing; hand- and machine-made paper; watermarking; and more. Over 320 illustrations. Reprint of the second, revised, and enlarged 1947 edition.

Creation Nov 03 2022 "Bible study, science, math, language arts, spelling and art with 12 'Character, connections': wisdom, faith, responsibility, diligence, honesty, cooperation, peaceableness, kindness, respect, obedience, thankfulness"--Page [1].

Seeing the Inside Nov 22 2021 Seeing the Inside is the first detailed study of one of the world's great visual art traditions and its role in the society that produces it. The bark painting of Aboriginal artists in western Arnhem Land is the product of a unique tradition of many thousands of years' duration. In recent years it has attracted enormous interest in the rest of Australia and beyond, with the result that the artists, who live primarily as hunters in this relatively secluded region of northern Australia, now paint for sale to the world art market. Though the richness and power of Aboriginal arts are now, belatedly, finding wide recognition, they remain insufficiently understood. In this thoroughly illustrated book Luke Taylor examines the creative methods of the bark painters and the cultural meaning of their work. He discusses, on the one hand, the arrangements which allow the artists to project their culture onto an international stage, and on the other, the continuing social and religious roles of their paintings within their own society. The result is a remarkable and fascinating picture of artistic creativity in a changing world.

African Lace-bark in the Caribbean Mar 27 2022 In Caribbean history, the European colonial plantocracy created a cultural diaspora in which African slaves were torn from their ancestral homeland. In order to maintain vital links to their traditions and culture, slaves retained certain customs and nurtured them in the Caribbean. The creation of lace-bark cloth from the lagetta tree was a practice that enabled slave women to fashion their own clothing, an exercise that was both a necessity, as clothing provisions for slaves were poor, and empowering, as it allowed women who participated in the industry to achieve some financial independence. This is the first book on the subject and, through close collaboration with experts in the field including Maroon descendants, scientists and conservationists, it offers a pioneering perspective on the material culture of Caribbean slaves, bringing into focus the dynamics of race, class and gender. Focussing on the time period from the 1660s to the 1920s, it examines how the industry developed, the types of clothes made, and the people who wore them. The study asks crucial questions about the social roles that bark cloth production played in the plantation economy and colonial society, and in particular explores the relationship between bark cloth production and identity amongst slave women.

Native Peoples of the Gulf Coast of Mexico Apr 15 2021 For too long, the Gulf Coast of Mexico has been dismissed by scholars as peripheral to the Mesoamerican heartland, but researchers now recognize that much can be learned from this region's cultures. Peoples of the Gulf Coast—particularly those in Veracruz and Tabasco—share so many historical experiences and cultural features that they can fruitfully be viewed as a regional unit for research and analysis. Native Peoples of the Gulf Coast of Mexico is the first book to argue that the people of this region constitute a culture area distinct from other parts of Mexico. A pioneering effort by a team of international scholars who summarize hundreds of years of history, this encyclopedic work chronicles the prehistory, ethnohistory, and contemporary issues surrounding the many and varied peoples of the Gulf Coast, bringing together research on cultural groups about which little or only scattered information has been published. The volume includes discussions of the prehispanic period of the Gulf Coast, the ethnohistory of many of the neglected indigenous groups of Veracruz and the Huasteca, the settlement of the American Mediterranean, and the unique geographical and ecological context of the Chontal Maya of Tabasco. It provides descriptions of the Popoluca, Gulf Coast Nahua, Totonac, Tepehua, Sierra „ Š h-u (Otom '), and Huastec Maya. Each chapter contains a discussion of each group's language, subsistence and settlement patterns, social organization, belief systems, and history of acculturation, and also examines contemporary challenges to the future of each native people. As these contributions reveal, Gulf Coast peoples share not only major cultural features but also historical experiences, such as domination by Hispanic elites beginning in the sixteenth century and subjection to forces of change in Mexico. Yet as contemporary people have been affected by factors such as economic development, increased emigration, and the spread of Protestantism, traditional cultures have become rallying points for ethnic identity. Native Peoples of the Gulf Coast of Mexico highlights the significance of the Gulf Coast for anyone interested in the great encuentro between the Old and New Worlds and general processes of culture change. By revealing the degree to which these cultures have converged, it represents a major step toward achieving a broader understanding of the peoples of this region and will be an important reference work on these indigenous populations for years to come.

The Conservation of Artifacts Made from Plant Materials Jul 19 2021 This teaching guide covers the identification, deterioration, and conservation of artifacts made from plant materials. Detailed information on plant anatomy, morphology, and development, focusing on information useful to the conservator in identifying plant fibers are described, as well as the processing, construction, and decorative techniques commonly used in such artifacts. A final chapter provides a thorough discussion of conservation, preservation, storage, and restoration methods. This is a valuable resource to conservators and students alike.
