begins with human origins in Africa some 6 million years ago and the spread of our remote ancestors across the Old World. Then we return to Africa and describe the emergence of Homo sapiens (modern humans) over 300,000 years ago, then, much later, their permanent settlement of Europe, Eurasia, Asia, and the Americas. From hunters and foragers, we turn to the origins of farming and animal domestication in different parts of the world after about 11,000 years ago and show how these new economies changed human existence dramatically. Five chapters tell the stories of the great pre-industrial civilizations that emerged after 5000 years before present in the Old World and the Americas, their strengths, volatility, and weaknesses. These chapters describe powerful rulers and their ideologies, also the lives of non-elites. The narratives chronicle the rise and fall of civilizations, and the devastating effects of long droughts on many of them. The closing chapter poses a question: Why is world

The Narrow Corridor Jun 04 2020 'As enjoyable as it is thought-provoking' Jared Diamond By the authors of the international bestseller *Why Nations Fail*, based on decades of research, this powerful new big-picture framework explains how some countries develop towards and provide liberty while others fall to despotism, anarchy or asphyxiating norms - and explains how liberty can thrive despite new threats. Liberty is hardly the 'natural' order of things; usually states have been either too weak to protect individuals or too strong for people to

protect themselves from despotism. There is also a happy Western myth that where liberty exists, it's a steady state, arrived at by 'enlightenment'. But liberty emerges only when a delicate and incessant balance is struck between state and society - between elites and citizens. This struggle becomes self-reinforcing, inducing both state and society to develop a richer array of capacities, thus affecting the peacefulness of societies, the success of economies and how people experience their daily lives. Explaining this new framework through compelling stories from around the world, in history and from today - and through a single diagram on which the development of any state can be plotted - this masterpiece helps us understand the past and present, and analyse the future. 'In this highly original and gratifying fresco, Daron Acemoglu and Jim Robinson take us on a journey through civilizations, time and locations. Naming and Mapping the Gods in the Ancient Mediterranean Sep 07 2020 Ancient religions are definitely complex systems of gods, which resist our understanding. Divine names provide fundamental keys to gain access to the multiples ways gods were conceived, characterized, and organized. Among the names given to the gods many of them refer to spaces: cities, landscapes, sanctuaries, houses, cosmic elements. They reflect mental maps which need to be explored in order to gain new knowledge on both the structure of the pantheons and the human

agency in the cultic dimension. By considering the intersection between naming and mapping, this book opens up new perspectives on how tradition and innovation, appropriation and creation play a role in the making of polytheistic and monotheistic religions. Far from being confined to sanctuaries, in fact, gods dwell in human environments in multiple ways. They move into imaginary spaces and explore the cosmos. By proposing a new and interdisciplinary angle of approach, which involves texts, images, spatial and archeaeological data, this book sheds light on ritual practices and representations of gods in the whole Mediterranean, from Italy to Mesopotamia, from Greece to North Africa and Egypt. Names and spaces enable to better define, differentiate, and connect gods.

The Global Code Sep 27 2019 For decades, Clotaire Rapaille's work focused on how people's relationships with the most important concepts in their lives—love, health, and money, for instance—are guided by subconscious cultural

messages. But recently, he has uncovered a new phenomenon: a "global unconscious," or core values and feelings that are consistent worldwide—the result of our constant interconnectedness. He has also identified a new group who are paving the way for the future of decision-making: the Global Tribe. These individuals are fluent in the language of culture, untied to any notion of nationalism or ideology. They are defining the key values driving our new world economy, with profound implications for how companies market their products and services. Rapaille takes us on a journey through China, Brazil, India, England and everywhere in between to discover the new standards for luxury, pleasure, technology and education. How can elite brands compete in a world of knockoffs? How can universities maintain their prestige when a cheap master's degree or doctorate is only a click away? We must speak the language of the Global Tribe in order to succeed. Building on seven years of research,

The Great Leveler Aug 07 2020 "Are mass violence and catastrophes the only forces that can seriously decrease economic inequality? To judge by thousands of years of history, the answer is yes. Tracing the global history of inequality from the Stone Age to today, Walter Scheidel shows that inequality never dies peacefully. Inequality declines when carnage and disaster strike and increases when peace and stability return. *The Great Leveler* is the first book to chart the crucial role of violent shocks in reducing inequality over the full sweep of human history around the world. Ever since humans began to farm, herd livestock, and pass on their assets to future generations, economic inequality has been a defining feature of civilization. Over thousands of years, only violent events have significantly lessened inequality. The "Four Horsemen" of leveling--mass-

mobilization warfare, transformative revolutions, state collapse, and catastrophic plagues--have repeatedly destroyed the fortunes of the rich. Scheidel identifies and examines these processes, from the crises of the earliest civilizations to the cataclysmic world wars and communist revolutions of the twentieth century. Today, the violence that reduced inequality in the past seems to have diminished, and that is a good thing. But it casts serious doubt on the prospects for a more equal future. An essential contribution to the debate about inequality, *The Great Leveler* provides important new insights about why inequality is so persistent--and why it is unlikely to decline anytime soon."--
The Creation of Inequality Nov 02 2022 Drawing on their knowledge of both living and prehistoric social groups, Flannery and Marcus describe the changes in logic that create larger and more hierarchical societies, and they argue that many kinds of inequality can be overcome by reversing these changes, rather than by violence.

The World's Construction Mechanism Oct 21

2021 The interdisciplinarity between the biological and human sciences is here to serve a daring objective: to decipher, by means of a logical chain, the explanatory factors of human trajectories and imbalances between societies and nations. To do this, *The World's Construction Mechanism* is based on an unprecedented analysis of the dynamics of the human species, combining the contributions of anthropology, archeology, biology, climatology, economics, geography, history and sociology. This book analyzes the roots of societal disharmony and presents ways of realizing a clear-sighted human project that is in step with the general interest of humanity.

The Cambridge World History: Volume 2, A World with Agriculture, 12,000 BCE-500 CE Jul

06 2020 The development of agriculture has often been described as the most important change in all of human history. Volume 2 of the Cambridge World History series explores the

origins and impact of agriculture and agricultural communities, and also discusses issues associated with pastoralism and hunter-fisher-gatherer economies. To capture the patterns of this key change across the globe, the volume uses an expanded timeframe from 12,000 BCE-500 CE, beginning with the Neolithic and continuing into later periods. Scholars from a range of disciplines, including archaeology, historical linguistics, biology, anthropology, and history, trace common developments in the more complex social structures and cultural forms that agriculture enabled, such as sedentary villages and more elaborate foodways, and then present a series of regional overviews accompanied by detailed case studies from many different parts of the world, including Southwest Asia, South Asia, China, Japan, Southeast Asia and the Pacific, sub-Saharan Africa, the Americas, and Europe.

Ancient Civilizations Mar 14 2021 Ancient Civilizations offers a comprehensive and

straightforward account of the world's first civilizations and how they were discovered, drawing on many avenues of inquiry including archaeological excavations, surveys, laboratory work, highly specialized scientific investigations, and both historical and ethnohistorical records. This book covers the earliest civilizations and the great powers in the Near East, moving on to the first Aegean civilizations, the Mediterranean world in the first millennium, Imperial Rome, northeast Africa, the divine kings in southeast Asia, and empires in East Asia, as well as early states in the Americas and Andean civilization. *Ancient Civilizations* includes a number of features to support student learning: a wealth of images, including several new illustrations; feature boxes which expand on key sites, finds and written sources; and an extensive guide to further reading. With new perceptions of the origin and collapse of states, including a review of the issue of sustainability, this fourth edition has been extensively updated in the light of

describing the field of overlap between historical ecology and the emerging sub-discipline of applied archaeology to highlight how modern environments and landscapes have been shaped by humans. Historical ecology is based on the recognition that humans are not only capable of modifying their environments, but that all environments on earth have already been directly or indirectly modified. This includes anthropogenic climate change, widespread deforestations, and species extinctions, but also very local alterations, the effects of which may last a few years, or may have legacies lasting centuries or more. With contributions from anthropologists, archaeologists, human geographers, and historians, this volume focuses not just on defining human impacts in the past, but on the ways that understanding these changes can help inform contemporary practices and development policies. Some chapters present examples of how ancient or current societies have modified their environments in

sustainable ways, while others highlight practices that had unintended long-term consequences. The possibilities of learning from these practices are discussed, as is the potential of using the long history of human resource exploitation as a method for building or testing models of future change. The volume offers overviews for students, researchers, and professionals with an interest in conservation or development projects who want to understand what practical insights can be drawn from history, and who seek to apply their work to contemporary issues.

The Creation of Inequality Oct 01 2022
Flannery and Marcus demonstrate that the rise of inequality was not simply the result of population increase, food surplus, or the accumulation of valuables but resulted from conscious manipulation of the unique social logic that lies at the core of every human group. Reversing the social logic can reverse inequality, they argue, without violence.

Capitalism and the Alternatives Nov 09 2020 Thirty years after its global triumph, neo-liberalism is an abject failure. While its advocates have succeeded in convincing citizens that no other way is possible, that no left turn can be made without an economic collapse, they have not fulfilled their promises of a better world and the result has been more inequality, insecurity, and speculation. Many have sought solace in collective goals - nationalism, narrow religion, and gender politics - while notions of universal solidarity, idealism, and humanism have all but disappeared. In *Capitalism and the Alternatives* Julius H. Grey seeks to rehabilitate economic equality as a fundamental social goal built on universal values such as individualism, liberty, and even romanticism. To achieve this,

he argues, it is necessary to move away from national, ethnic, religious, and even gender loyalties. The importance in each society of common culture and widely accepted moral values, Grey suggests, cannot be overstated. With its rampant political correctness, the modern left seems to have lost sight of morality and individual freedom. While most commentators stake out a partisan position in their criticism, Grey's notion of individual romanticism as the basis of a socially progressive society and his stress on free will, culture, classical education, and the right to dissent demand an overhaul of both the right and the left. A fundamental rethinking of the social, political, and economic foundations of modern industrial society, Capitalism and the Alternatives proposes freedom from identity, instead of communitarianism and tradition, as a condition for liberty and justice.

Ancient Complex Societies Jun 16 2021

Ancient Complex Societies examines the archaeological evidence for the rise and functioning of politically and socially “complex” cultures in antiquity. Particular focus is given to civilizations exhibiting positions of leadership, social and administrative hierarchies, emerging and already developed complex religious systems, and economic differentiation. Case studies are drawn from around the globe, including Asia, the Mediterranean region, and the American continents. Using case studies from Africa, Polynesia, and North America, discussion is dedicated to identifying what “complex” means and when it should be applied to ancient systems. Each chapter attempts to not only explore the sociopolitical and economic elements of ancient civilizations, but to also present an overview of what life was like for the

Time and History in Prehistory Jul 18 2021 *Time and History in Prehistory* explores the many processes through which time and history are conceptualized and constructed, challenging the perception of prehistoric societies as ahistorical. Drawing equally on contemporary theory and illustrative case studies, and firmly rooted in material evidence, this book rearticulates concepts of time and history, questions the kind

of narratives to be written about the past and underlines the fundamentally historical nature of prehistory. From a range of multi-disciplinary perspectives, the authors of this volume address the scales at which archaeological evidence and narrative are interwoven, from a single day to deep history and from a solitary pot to a complete city. In doing so, they argue the need for a multi-scalar approach to prehistoric data that allows for the interplay between short and long term, and for analytical units that encourage us to move continuously between scales. The growing interest in time and history in archaeology and across a wide range of disciplines concerned with human action and the human past highlights that these are exceptionally active fields. By juxtaposing varied viewpoints, this volume bridges gaps in narrative, finds a place for inclusive histories and makes clear the benefit of integrative and interdisciplinary approaches, including different disciplines and types of data.

The Rise of Gay Rights and the Fall of the British Empire Sep 19 2021

This book argues that there is an important connection between ethical resistance to British imperialism and the ethical discovery of gay rights. It examines the roots of liberal resistance in Britain and resistance to patriarchy in the USA, showing the importance of fighting the demands of patriarchal manhood and womanhood to countering imperialism. Advocates of feminism and gay rights are key because they resist the gender binary's role in rationalizing sexism and homophobia. The connection between the rise of gay rights and the fall of empire illuminates questions of the meaning of democracy and universal human rights as shared human values that have appeared since World War II. The book casts doubt on the thesis that arguments for gay rights must be extrinsic to democracy and reflect Western values. To the contrary, gay rights arise from within liberal democracy, and its critics polemically use such opposition to

A Taste for Green Aug 26 2019 Often along vast expanses, ancient societies traded certain commodities that were considered valuable either for functional or symbolic reasons – or, rather, a mixture of both factors. *A Taste for Green* addresses latest research into the acquisition of jade, turquoise or variscite, all of which share a characteristic greenish colour and an engaging appearance once they are polished in the shape of axes or assorted adornments. Papers explore how, in addition to constituting economic transactions, the transfess of these materials were also statements of social liaisons, personal capacities, and relation to places or to unseen forces. The volume centres on two study areas, Western Europe and México/Southwest US, which are far apart not just in geographical terms but also with regard to their chronology and socioeconomic features. Nurturing Our Humanity offers a new perspective on our personal and social options in today's world, showing how we can build societies that support our great human capacities for consciousness, caring, and creativity. It brings together findings--largely overlooked--from the natural and social sciences debunking the popular idea that we are hard-wired for selfishness, war, rape, and greed. Its groundbreaking new approach reveals connections between disturbing trends like climate change denial and regressions to strongman rule. Moving past right vs. left, religious vs. secular, Eastern vs. Western, and other familiar categories that do not include our formative parent-child and gender relations, it looks at where societies fall on the partnership-domination scale. On one end is the domination system that ranks man over man, man over woman, race over race, and man over nature. On the other end is the more peaceful, egalitarian, gender-balanced, and sustainable partnership

Nurturing Our Humanity explores how behaviors, values, and socio-economic institutions develop differently in these two environments, documents how this impacts nothing less than how our brains develop, examines cultures from this new perspective (including societies that for millennia oriented toward partnership), and proposes actions supporting the contemporary movement in this more life-sustaining and enhancing direction. It shows how through today's ever more fearful, frenzied, and greed-driven technologies of destruction and exploitation, the domination system may lead us to an evolutionary dead end. A more equitable and sustainable way of life is biologically possible and culturally attainable: we can change our course.

By the beginning of civilization some 6,000 years ago, these changes rigidified and became destructive on a large scale. They have accumulated to such an extent that our species now faces extinction or a dismal future of ever-worsening ecocide. Meaninglessness and confusion have become rampant in our postmodern era. The human psyche has become utterly fragmented and rendered a stranger to reality, other people, and itself. As dispiriting as this all seems, the path forward has always been available to us if we can overcome the ignorance that prevents us from taking it. We must reject the values of civilization and return to the naturalistic perspective of our ancestors where our values, thinking, feeling, and actions are once again based on how nature and reality truly function. Framing Complexity in Formative Mesoamerica

Apr 02 2020 A fresh examination of variable social and economic processes, Framing Complexity in Formative Mesoamerica explores nascent social complexity during the Preclassic/Formative period in Mesoamerica and addresses broader social questions about egalitarian and transegalitarian prehispanic Mesoamerican cultural groups. Contributors present multiple lines of evidence demonstrating the process of social complexity and reconsider a number of traditionally accepted models and presumed tenets as a result of the wealth of empirical data that has been gathered over the past four decades. Their chapters approach complexity as a process rather than a state of being by exploring social aggregation, the emergence of ethnic affiliations, and aspects of

regional and macroregional variability. Framing Complexity in Formative Mesoamerica presents some of the most recent data—and the implications of that data—for understanding the development of complex societies as human beings moved into urban environments. The book is an especially important volume for researchers and students working in Mesoamerica, as well as archaeologists taking a comparative approach to questions of complexity. Resisting Injustice and the Feminist Ethics of Care in the Age of Obama Nov 21 2021

David A. J. Richards's *Resisting Injustice and The Feminist Ethics of Care in The Age of Obama*: "Suddenly,...All The Truth Was Coming Out" builds on his and Carol Gilligan's *The Deepening Darkness* to examine the roots of the resistance movements of the 1960s, the political psychology behind contemporary conservatism, and President Obama's present-day appeal as well as the reasons for the reactionary politics against him. Richards begins by laying out the basics of the ethics of care and proposing an alternative basis for ethics: relationality, which is based in convergent findings in infant research, neuroscience, and evolutionary psychology. He critically analyzes patriarchal politics and states that they are rooted in a reactionary psychology that attacks human relationality and ethics. From there, the book

examines the 1960s resistance movements and argues that they were fundamentally oriented around challenging patriarchy. Richards asserts that the reactionary politics in America from the 1960s to the present are in service of an American patriarchy threatened by the resistance movements ranging from the 1960s civil rights movements to the present gay rights movement. Reactionary politics intend to marginalize and even reverse the ethical achievements accomplished by resistance movements—creating, in effect, a system of patriarchy hiding in democracy. Richards consequently argues that Obama's appeal is connected to his challenge to this system of patriarchy and will examine both Obama's appeal and the reactions against him in light of the 2012 presidential election. This book positions recent American political development in a broad analysis of the role of patriarchy in human oppression throughout history, and argues that a feminist-based ethics of care is

necessary to form a more humane and inclusive democratic politics.

David's Successors Dec 11 2020 David's Successors: Kingship in the Old Testament argues for a new reading of kingship in the Old Testament. Rather than presenting the kings as monsters—with the occasional angelic ruler—this study seeks a more nuanced version of kingship. This book considers the original concept and context of kingship before concentrating on five kings in particular: Jeroboam, Ahab, Hezekiah, Manasseh, and Josiah. Much contemporary scholarship is concerned with the reconceptualization and recontextualization of kingship that harkens from a negative perspective on kingship, but this book will fully consider the positive and original vision of kingship. This book is ultimately rooted in a hopeful and joyful view of humanity as found in the Psalms, Sirach, and the Chronicles.

Cultural Evolution Oct 28 2019 Since the dawn of social science, theorists have debated how

and why societies appear to change, develop and evolve. Today, this question is pursued by scholars across many different disciplines and our understanding of these dynamics has grown markedly. Yet, there remain important areas of disagreement and debate: what is the difference between societal change, development and evolution? What specific aspects of cultures change, develop or evolve and why? Do societies change, develop or evolve in particular ways, perhaps according to cycles, or stages or in response to survival necessities? How do different disciplines—from sociology to anthropology to psychology and economics—approach these questions? This book provides complex and nuanced answers to these, and many other, questions. First, the book invites readers to consider the broad landscape of societal dynamics across human history, beginning with humanity's origins in small nomadic bands of hunter gatherers through to the emergence of post-industrial democracies.

Then, the book provides a tour of several prominent existing theories of cultural change, development and evolution. Approaches to explaining cultural dynamics will be discussed across disciplines and schools of thought, from "meme" theories to established cumulative cultural evolutionary theories to newly emerging theories on cultural tightness-looseness. The book concludes with a call for theoretical integration and a frank discussion of some of the most unexamined structures that drive cultural dynamics across schools of thought.

American capitalism. From outsourcing to excessive debt taking, private equity investment helped normalize once-taboo business strategies while growing into an over \$3 trillion industry in control of thousands of companies and millions of workers. Daniel Scott Souleles opens a window into the rarefied world of private equity investing through ethnographic fieldwork on private equity financiers. *Songs of Profit, Songs of Loss* documents how and why investors buy, manage, and sell the companies that they do; presents the ins and outs of private equity deals, management, and valuation; and explains the historical context that gave rise to private equity and other forms of investor-led capitalism. In addition to providing invaluable ethnographic insight, *Songs of Profit, Songs of Loss* is also an anthropological study of inequality as Souleles connects the core components of financial capitalism to economic disparities. Souleles uses local ideas of “value” and “time” to frame the ways private equity investors comprehend their

work and to show how they justify the prosperity and poverty they create. Throughout, Souleles argues that understanding private equity investors as contrasted with others in society writ large is essential to fully understanding private equity within the larger context of capitalism in the United States.

Antike und Urchristentum Jan 12 2021

Samuel Vollenweider bettet die urchristliche Literatur und ihre Theologien konsequent in ihre antike Umgebung ein. Die hier behandelte Landkarte umfasst theologische Zentralthemen wie die Auferstehung Jesu und der Toten, den christologischen Monotheismus, Christi Mittlerschaft, die Anthropologie und das Weltverständnis des Neuen Testaments.

Besondere Aufmerksamkeit gilt der Theologie des Paulus, zumal dem Philipperbrief, sowie dem

Stellenwert der antiken Philosophie im frühen Christentum. Weitere Arbeiten kreisen um die exegetische Relevanz von Kulturwissenschaften und Religionspsychologie wie um die Rezeptionen biblischer Texte (Paulusbriefe, Johannesprolog) in der Spätantike (unter anderem im "Physiologus") und in der Reformationszeit. Der Band enthält Arbeiten des Autors, die zwischen 2002 und 2019 entstanden sind. Sein Titel nimmt Bezug auf einen gleichnamigen programmatischen Aufsatzband von Günther Bornkamm, der vor rund 60 Jahren publiziert wurde.
