Executive Guide to Business Success through Human-Centred Systems Dec 31 2019 This book is about people and skilled work. There has been much turmoil in the business environment about how to best manage the balance between people and technology, at a time when pressures for cost reduction are ever greater. Our argument is that people are central to business success, and the appropriate use of technology should support their needs. This is not always easy in practice. We work in a period when change occurs in ever-shortening cycles. Black-and-white solutions may seem attractive, but the long-term consequences are rarely advantageous. A new system is required, building on lessons from the past. Human-centred systems build upon core skills of the workforce within a rich, emancipatory environment, utilising the benefits of technology. Change can be embraced to achieve competitive advantage and mutual benefit. The three authors are, respectively, engineering director of an innovative international manufacturing company; analyst for an international merchant bank; and university business school professor. The book is intended to offer a new synthesis of theory and practical experience, derived from recent British and European collaborative programmes. We are grateful to our colleagues and families for their tolerance during the writing of this book. Even human-centred books impose pressures on busy people.
