The Transformation of Meaning in Psychological Therapies

Nov 10 2020 Are there common mechanisms that apply across different therapies that might explain their effectiveness? Many psychologists, psychotherapists and counsellors, whether clinicians or researchers, now recognize that one such key mechanism involves the transformation of meaning in the process of therapy. The purpose of this book is to show how the transformation of meaning is related to therapeutic change. Change in therapy can and should occur at a number of levels for improvement to be maintained, whether in behavior therapy, cognitive therapy or psychoanalytic therapy. The leading scientists and practitioners who have contributed to this book approach therapy from very different perspectives, but they together help to fashion a common framework for understanding the role of meaning in therapeutic change.

Convex Integration Theory Jul 27 2019 §1. Historical Remarks

Convex Integration theory, first introduced by M. Gromov [17], is one of three general methods in immersion-theoretic topology for solving a broad range of problems in geometry and topology. The other methods are: (i) Removal of Singularities, introduced by M. Gromov and Y. Eliashberg [8]; (ii) the covering homotopy method which, following M. Gromov's thesis [16], is also referred to as the method of sheaves. The covering homotopy method is due originally to S. Smale [36] who proved a crucial covering homotopy result in order to solve the classification problem for immersions of spheres in Euclidean space. These general methods are not linearly related in the sense that successive methods subsumed the previous methods. Each method has its own distinct foundation, based on an independent geometrical or analytical insight. Consequently, each method has a range of applications to problems in topology that are best suited to its particular insight. For example, a distinguishing feature of Convex Integration theory is that it applies to solve closed

underdetermined non-linear systems of partial differential equations. As a case of interest, the Nash-Kuiper C¹-isometric immersion theorem can be reformulated and proved using Convex Integration theory (cf. Gromov [18]). No such results on closed relations in jet spaces can be proved by means of the other two methods. On the other hand, many classical results in immersion-theoretic topology, such as the classification of immersions, are provable by all three methods.

Integrating Theory and Practice in Clinical

Neuropsychology Sep 01 2022 The extent to which a brain injured individual can resume premorbid functioning depends on factors ranging from the physiological to the psychological. Originally published in 1989, the thesis of this volume is that atheoretical application of practical techniques in clinical neuropsychology is as ill-conceived as a neuropsychological theory that fails to acknowledge the role of historical or situational context in behaviour or task performance. The chapters that follow address this thesis as experimental psychologists join clinicians in an effort to bridge the gap between theoretical abstraction and practical reality.

Integration Theory, Product Measures) basically follow the clear and approved exposition given in the author's earlier book on 'Probability Theory and Measure Theory'. Special emphasis is laid on a complete discussion of the transformation of measures and integration with respect to the product measure, convergence theorems, parameter depending integrals, as well as the Radon-Nikodym theorem. The final chapter, essentially new and written in a clear and concise style, deals with the theory of Radon measures on Polish or locally compact spaces. With the main results being Luzin's theorem, the Riesz representation theorem, the Portmanteau theorem, and a characterization of locally compact spaces which are Polish, this chapter is a true invitation to study topological measure theory. The text addresses graduate students, who wish to learn the fundamentals in measure and integration theory as needed in modern analysis and probability theory. It will also be an important source for anyone teaching such a course.

Contributions To Information Integration Theory Oct 29 2019 The theory of information integration provides a unified, general approach to the three disciplines of cognitive, social, and developmental psychology. "all-else-equal," and it's precisely this question that empirical work attempts to confirm. Thus theory and empirics have an intrinsic connection, and in recognizing this scholars can bridge the gap between the two. The first part of the book examines the "all-else-equal" connection and goes on to show how theoretical models yield empirical implications and how substantive identification is the lynch-pin of a credible research design. The second part then follows the progressive back-and-forth between theory and empirics in existing scholarship, breaking these interactions into five types: reinterpreting, elaboration, distinguishing, disentangling, and modeling the research design. .
